QUESTION 1

An administrator received previously used media. The administrator inserted the media into the library, ran a inventory, updated the volume configuration, and initiated a backup. The backup ran and froze every tape that had been recently added.

Which NetBackup configuration must the administrator change to prevent this scenario from recurring?

A. assign the media to a volume pool

B. allow media overwrite

C. change the barcode tag

D. change the media ID generation rule

Correct Answer: B

QUESTION 2

Which file contains LiveUpdate server configuration?

A. pd.conf

B. bp.conf

C. nblu.conf

D. vm.conf

Correct Answer: C

QUESTION 3

An administrator wants deduplication clients in a remote office to perform backups so that less data is sent over the wide area network (WAN).

Which action should the administrator perform to reduce the total amount of data sent over the WAN?

A. set client attributes to Always use the media server

B. set client attributes to Always use client-side deduplication

C. set the deduplication disk pool to Limit I/O strtsinis

D. enable deduplication stream handlers for the clients

Correct Answer: B

QUESTION 4

An administrator wants clients in a remote office to perform client-side deduplication instead of Media Server deduplication.

Where should the administrator set the parameter in the Host Properties to ensure client- side deduplication is performed?

A. Master Server > Client Attributes > client_hostname > General > Always use client-side deduplication

B. Clients > General > Always use client-side deduplication

C. Master Server > Client Attributes > General > Always use client-side deduplication

D. Clients > Deduplication > Always use client-side deduplication

Correct Answer: A
