**QUESTION 1**

A system administrator is receiving an error while trying to connect to the administrative console of an application server profile. The connection is being made from a remote web browser that has been installed and verified previously. Assuming that this application server is using default ports, what is the MOST probable cause of this error?

- A. The adminconsole application was stopped previously from the adminconsole
- B. The Application Server was not started
- C. The WebSphere configuration database is not running
- D. The adminconsole application was uninstalled from the adminconsole

Correct Answer: B

QUESTION 2

Which of the following is the correct way to delete a profile in WebSphere Application Server V6?

- A. Use the "Profile creation wizard"
- B. Delete the profile Template directory
- C. Use the wasprofile command line utility
- D. Delete the profile directory

Correct Answer: C

QUESTION 3

If a system administrator uses the Tivoli Performance Viewer to monitor application servlets and EJB's which of the following sets of metrics should be viewed in order to BEST evaluate the performance of the application?

- A. Average response time, heap size, garbage collection statistics
- B. Average response time, number of requests/transactions, number of HTTP sessions
- C. Average response time, heap size of datasource connection pool.
- D. Number of transactions, size of datasource connection pool, CPU utilization

Correct Answer: B

**QUESTION 4**

The customer has deployed a WebSphere-based application that performs excessive database operations. The application is deployed to a 2-node symmetric cluster, with 2 application servers per node, for a cluster size of 4 members. All cluster members are configured identically and there exists no other servers on clusters in this cell. In addition, a data source is defined at the cell-scoped level with a maximum of 100 connections. Given that each database connection consumes 2MB of memory, under peak load, how much of the JVM heap on each server is consumed by connections?

- A. 25MB
- B. 50 MB
- C. 100MB
- D. 200MB

Correct Answer: D

QUESTION 5

A system administrator is using the administrative console and accidentally closes the browser without saving any changes made during that session. What must the system administrator do to make sure any configuration changes that were made during the last session are not lost?

- A. Lo in as a different user and save the master repository.
- B. O and hand-edit the configuration xml files in the appropriate places
- C. Restore a backup copy of the master configuration
- D. Make those changes permanent when the system administrator logs in again

Correct Answer: D
