Following Questions and Answers are all new published by IBM Official Exam Center

QUESTION 1

A solution developer creates a message flow that includes an XSLTransform node. The node property specifies that the XSL style sheet is to be cached. The solution developer deploys the XSL style sheet in the BAR file with the message flow. Subsequently, the style sheet needs to be revised. How does the solution developer enable the message flow to use the revised style sheet?

A. Use the mqsicacheadmin command to refresh the cache with the new style sheet.

B. Update the BAR file with the modified style sheet and redeploy it.

C. Update the style sheet in the Application Development view of the Toolkit. Once the changes are saved, the style sheet is reloaded automatically by any message flows that use it.

D. Update the style sheet in the directory specified by the Style sheet directory property of the XSLTransform node. Once the changes are saved, the style sheet is reloaded automatically by any message flows that use it.
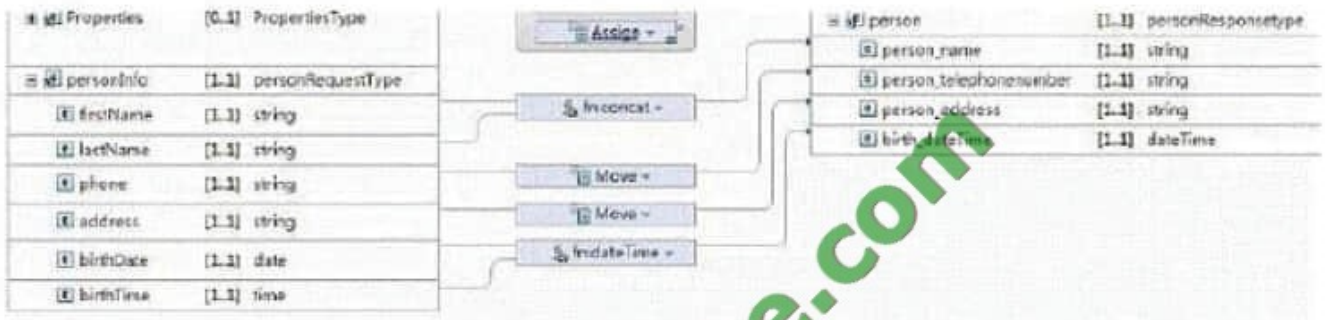

Correct Answer: B

QUESTION 2

A sales company is currently running 2 message flows. The first, ProcessOrder, validates customer orders and then sends the shipping information to the warehouse via an MQ request message. Once the warehouse has shipped the order, a reply is sent back which is processed by the second flow, SendConfirmation, to send a confirmation to the customer. The company is now expanding and has multiple warehouses. The solution developer must modify ProcessOrder to send messages to each warehouse only for the items it stocks, and SendConfirmation to send a response message only when all warehouses have replied. What node(s) should the solution developer use?

A. SendConfirmation -> MQGet

B. SendConfirmation -> Collector

C. ProcessOrder -> Sequence SendConfirmation -> Resequence

D. ProcessOrder -> AggregateControl and AggregateRequest SendConfirmation -> AggregateReply

Correct Answer: D

QUESTION 3

A company has person information in its HR system and another application system. Person schemas in these two systems are similar. The solution developer uses the Mapping node to map the person information when developing an application. Following is the detailed information about the Mapping node.

	[0..1]	PropertiesType				person	[1..1]	personResponsetype
Properties				Assign ▼		person_name	[1..1]	string
						person_telephonenumber	[1..1]	string
personInfo	[1..1]	personRequestType		fn:concat ▼		person_address	[1..1]	string
firstName	[1..1]	string				birth_dateTime	[1..1]	dateTime
lastName	[1..1]	string						
phone	[1..1]	string		Move ▼				
address	[1..1]	string		Move ▼				
birthDate	[1..1]	date		fn:dateTime ▼				
birthTime	[1..1]	time						

fn:concat has the following format.

string1	xs:string	$firstName
string2	xs:string	'.'
string3	xs:string	$lastName

fn:dateTime has the following logic.

date	xs:date	$birthDate
time	xs:time	$birthTime

This is the person information record that exists in the HR system.

```
<personInfo>
        <firstName>Alexandra</firstName>
        <lastName>Thomas</lastName>
        <phone>+1-803-467-1234</phone>
        <address>Pennsylvania Avenue NW,Washington DC</address>
        <birthDate>1971-04-17</birthDate>
        <birthTime>09:05:03</birthTime>
</personInfo>
```

After the solution developer performs this transformation for this person information, which one of following results is correct?

A. A. Alexandra . Thomas +1-803-467-1234 Pennsylvania Avenue NW,Washington DC 197104-17 09:05:03

B. B. Alexandra . Thomas +1-803-467-1234 Pennsylvania Avenue NW,Washington DC 197104-17T09:05:03

C. C. Alexandra Thomas +1-803-467-1234 Pennsylvania Avenue NW,Washington DC 1971-0417T09:05:03

D. D. Alexandra Thomas +1-803-467-1234 Pennsylvania Avenue NW,Washington DC 1971-0417 09:05:03
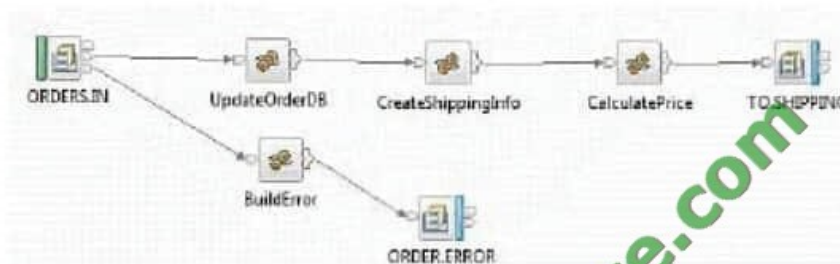

Correct Answer: B

QUESTION 4

A solution developer has deployed a message flow containing the DatabaseRetrieve node. The connection properties to the database were created using the mqsicreateconfigurableservice command. The solution developer has been told that the database is to be relocated to a different server. How should the connection properties be updated by the solution developer to reflect the new server?

A. Run mqsisetdbparms.

B. Run mqsichangebroker.

C. Run mqsichangeproperties.

D. Use a context sensitive menu in the Broker view of the Toolkit.

Correct Answer: C

QUESTION 5

A solution developer needs to enhance a message flow with node information to aid in problem resolution, should there be a failure within the flow. Consider the following flow, named "OrderProcess".

In the 3 Compute nodes, UpdateOrderDB, CreateShppinginfo and CalculatePrice, the solution developer inserts the following statements as the first 2 lines of ESQL:

```
SET OutputLocalEnvironment = InputLocalEnvironment;
SET OutputLocalEnvironment.Node = NodeLabel;
```

The BuildError Compute, which is linked to the ORDERS.IN catch terminal, has the following ESQL added:

```
CREATE FIELD OutputRoot.XMLNSC.Fail.Location
        VALUE MessageFlowLabel ||
        '.' ||
        InputLocalEnvironment.Node;
```

On testing the flow, there is a failure within the CalculatePrice node.

What is the content of the Location tag in the message written to the ORDER.ERROR queue?

A.

B. OrderProcess.

C. OrderProcess.CalculatePrice

D. OrderProcess.CreateShippingInfo

E. OrderProcess.CreateShippingIn fo

Correct Answer: A
