QUESTION 1

Which of the following are default settings when using the Policy Builder to build a security policy based on the QA lab deployment scenario? (Choose two.)

- A. All learned entities are placed in staging.
- B. Attack signatures are not placed in staging
- C. The security policy is placed in blocking mode
- D. Tightening is enabled only on file types and parameters.

Correct Answer: BC

QUESTION 2

A BIG IP Administrator needs to create a virtual server for a new secure end-to-end web application. After change in configuration the virtual server .3 still marked down. The configuration of the virtual server and the pool member are correct. A quick server shows the status. To fix the issue, what should the BIG-IP Administrator inform the web server administrator to do?

- A. change web server configuration to use SSL/TLS
- B. reboot the server
- C. restart the web service
- D. change web server configuration to use SSH/SCP

Correct Answer: A

If the application needs to be secure `end-to-end` the web server needs to use SSL as well. Most web servers will not required to HTTP requests when configured with HTTPS, so the monitor is failing.

QUESTION 3

When a business is hacked, they often lose more than money. What are the other consequences to a business as a result of being hacked? Select two.

- A. Helpful third party reviews of the security needs of the customer's web applications.
- B. Valuable free press that occurs as companies address hacking incidents.
- C. Penalties related to non-compliance with laws and regulations.
- D. Final resolution of all security vulnerabilities of the business's web applications.
- E. Loss of customers when slow connections drive customers to competitor's site.

Correct Answer: AD

QUESTION 4

Which device group type allows a BIG IP system to automatically become active in the event that the current active system fails?

- A. Sync-active
- B. sync-failover
- C. sync-standby
- D. sync-only

Correct Answer: B

The sync-failover group allows for failover of a traffic group. The sync-only will synchronize ASM profiles and some other device information but does not deal with traffic groups

QUESTION 5

The BIG-IP full proxy architecture has full visibility from the client to the server and from the server to the client.

What security benefit does this provide to customers?

- A. Offloads security functionality from other devices such as network firewalls and Intrusion Prevention Systems (IPS), which may experience performance degradation when inspecting DNS queries and responses.
- B. provides enhanced support for DNS servers.
- C. Establishes highly detailed policies based on your customer's business in requirements, performs multiple factors of authentication, detects corporate versus non-corporate devices, checks OS patch levels, and determines antivirus patch levels.
- D. Provides industry-leading knowledge of application behavior as it travels through a network, and it applies that knowledge to security because it knows how an application behaves at any point in the reply request process

Correct Answer: D
