**QUESTION 1**

Which of the following methods will provide the most complete backup of an R75 configuration?

- A. Execute command `upgrade_export`
- B. Database Revision Control
- C. Policy Package Management
- D. Copying the directories `$FWDIR/conf` and `$CPDIR/conf` to another server

Correct Answer: A

QUESTION 2

Before upgrading SecurePlatform, you should create a backup. To save time, many administrators use the command `backup`. This creates a backup of the Check Point configuration as well as the system configuration.

An administrator has installed the latest HFA on the system for fixing traffic problem after creating a backup file. There is a mistake in the very complex static routing configuration. The Check Point configuration has not been changed. Can the administrator use a restore to fix the errors in static routing?

- A. The restore is done by selecting Snapshot Management from the boot menu of GAiA.
- B. A backup cannot be restored, because the binary files are missing.
- C. The restore can be done easily by the command `restore` and selecting the file `netconf.C`.
- D. The restore is not possible because the backup file does not have the same build number (version).

Correct Answer: C

QUESTION 3

The Captive Portal tool:

- A. Allows access to users already identified.
- B. Acquires identities from unidentified users.
- C. Is deployed from the Identity Awareness page in the Global Properties settings.
- D. Is only used for guest user authentication.

Correct Answer: B

**QUESTION 4**

Because of pre-existing design constraints, you set up manual NAT rules for your HTTP server. However, your FTP server and SMTP server are both using automatic NAT rules. All traffic from your FTP and SMTP servers are passing through the Security Gateway without a problem, but traffic from the Web server is dropped on rule 0 because of anti-spoofing settings. What is causing this?

- A. Allow bi-directional NAT is not checked in Global Properties.
- B. Translate destination on client side is not checked in Global Properties under Manual NAT Rules.
- C. Manual NAT rules are not configured correctly.
- D. Routing is not configured correctly.

Correct Answer: B

QUESTION 5

After implementing Static Address Translation to allow Internet traffic to an internal Web Server on your DMZ, you notice that any NATed connections to that machine are being dropped by anti-spoofing protections. Which of the following is the MOST LIKELY cause?

- A. The Global Properties setting Translate destination on client side is checked. But the topology on the DMZ interface is set to Internal - Network defined by IP and Mask. Uncheck the Global Properties setting Translate destination on client side.
- B. The Global Properties setting Translate destination on client side is unchecked. But the topology on the external interface is set to Others +. Change topology to External.
- C. The Global Properties setting Translate destination on client side is checked. But the topology on the external interface is set to External. Change topology to Others +.
- D. The Global Properties setting Translate destination on client side is unchecked. But the topology on the DMZ interface is set to Internal - Network defined by IP and Mask. Check the Global Properties setting Translate destination on client side.

Correct Answer: D
