**QUESTION 1**

You have configured SNX on the Security Gateway. The client connects to the Security Gateway and the user enters the authentication credentials. What must happen after authentication that allows the client to connect to the Security Gateway's VPN domain?

- A. Active-X must be allowed on the client.
- B. An office mode address must be obtained by the client.
- C. SNX modifies the routing table to forward VPN traffic to the Security Gateway.
- D. The SNX client application must be installed on the client.

Correct Answer: C

---

**QUESTION 2**

Which VPN Community object is used to configure Hub Mode VPN routing in SmartDashboard?

- A. Mesh
- B. Star
- C. Routed
- D. Remote Access

Correct Answer: B

---

**QUESTION 3**

What is the difference between Standard and Specific Sign On methods?

- A. Standard Sign On allows the user to be automatically authorized for all services that the rule allows, but re-authenticate for each host to which he is trying to connect. Specific Sign On requires that the user re-authenticate for each service.
- B. Standard Sign On requires the user to re-authenticate for each service and each host to which he is trying to connect. Specific Sign On allows the user to sign on only to a specific IP address.
- C. Standard Sign On allows the user to be automatically authorized for all services that the rule allows. Specific Sign On requires that the user re-authenticate for each service and each host to which he is trying to connect.
- D. Standard Sign On allows the user to be automatically authorized for all services that the rule allows. Specific Sign On requires that the user re-authenticate for each service specifically defined in the window Specific Action Properties.

Correct Answer: C

---

#### QUESTION 4

Certificates for Security Gateways are created during a simple initialization from\_\_\_\_\_.

- A. SmartUpdate
- B. sysconfig
- C. The ICA management tool.
- D. SmartDashboard

Correct Answer: D

---

#### QUESTION 5
