QUESTION 1

Which command shows the installed licenses in Expert mode?

A. print cplic

B. show licenses

C. fwlic print

D. cplic print

Correct Answer: D

The command that shows the installed licenses in Expert mode is cplic print. This command displays information about the licenses that are installed on the local machine or a remote machine. The other commands are not valid for showing licenses in Expert mode.

QUESTION 2

In SmartConsole, on which tab are Permissions and Administrators defined?

A. Manage and Settings

B. Logs and Monitor

C. Security Policies

D. Gateways and Servers

Correct Answer: A

Permissions and Administrators are defined on the Manage and Settings tab in SmartConsole. This tab allows you to create and manage administrator accounts, roles, permissions, and authentication methods for accessing SmartConsole and other Check Point management interfaces. QUESTION 3

Which option, when applied to a rule, allows traffic to VPN gateways in specific VPN communities?

A. All Connections (Clear or Encrypted)

B. Accept all encrypted traffic

C. Specific VPN Communities

D. All Site-to-Site VPN Communities

Correct Answer: C

The option that allows traffic to VPN gateways in specific VPN communities is Specific VPN Communities. This option enables you to define which VPN communities are allowed in the rule. All Connections (Clear or Encrypted) allows traffic to any destination, regardless of whether it is encrypted or not. Accept all encrypted traffic allows traffic to any encrypted destination, regardless of the VPN community. All Site-to-Site VPN Communities allows traffic to any site-to-site VPN gateway, regardless of the VPN community. Therefore, the correct answer is C. Specific VPN Communities.

QUESTION 4

When configuring LDAP User Directory integration, Changes applied to a User Directory template are:

A. Reflected immediately for all users who are using template.

B. Not reflected for any users unless the local user template is changed.

C. Reflected for all users who are using that template and if the local user template is changed as well.

D. Not reflected for any users who are using that template.

Correct Answer: A

The answer is A because changes applied to a User Directory template are reflected immediately for all users who are using that template. A User Directory template defines the settings for connecting to an LDAP server, such as the server name, port, base DN, user filter, and group filter. When a User Directory template is modified, all users who are using that template will inherit the changes without requiring any additional actions References: Check Point R81 Identity Awareness Administration Guide, [Check Point R81 User Directory Templates]

QUESTION 5

What command would show the API server status?

A. cpm status

B. api restart

C. api status

D. show api status

Correct Answer: D

The command api status shows the API server status, including whether it is enabled or not, the port number, and the API version. References: Check Point R81 API Reference Guide
