**QUESTION 1**

Phase 1 of the two-phase negotiation process conducted by IKE operates in _____ mode.

- A. Main
- B. Authentication
- C. Quick
- D. High Alert

Correct Answer: A

QUESTION 2

In SmartConsole, on which tab are Permissions and Administrators defined?

- A. Manage and Settings
- B. Logs and Monitor
- C. Security Policies
- D. Gateways and Servers

Correct Answer: A

Permissions and Administrators are defined on the Manage and Settings tab in SmartConsole. This tab allows you to create and manage administrator accounts, roles, permissions, and authentication methods for accessing SmartConsole and other Check Point management interfaces. QUESTION 3

Which repositories are installed on the Security Management Server by SmartUpdate?

- A. License and Update
- B. Package Repository and Licenses
- C. Update and License and Contract
- D. License and Contract and Package Repository

Correct Answer: D

According to the Managing and Installing license via SmartUpdate, there are two repositories installed on the Security Management Server by SmartUpdate: License and Contract and Package Repository. The License and Contract repository stores all licenses available and all of the assigned licenses. The Package Repository stores all packages downloaded from the Check Point Cloud or uploaded from a local device. References: Managing and Installing license

via SmartUpdate

QUESTION 4

Fill in the blank: The_____is used to obtain identification and security information about network users.

- A. User index
- B. UserCheck
- C. User Directory
- D. User server

Correct Answer: C

The User Directory is used to obtain identification and security information about network users. It can be integrated with external user databases such as LDAP, RADIUS, or TACACS+. References: Certified Security Administrator (CCSA) R81.20 Course Overview, page 9.

QUESTION 5

Which one of the following is TRUE?

- A. Ordered policy is a sub-policy within another policy
- B. One policy can be either inline or ordered, but not both
- C. Inline layer can be defined as a rule action
- D. Pre-R80 Gateways do not support ordered layers

Correct Answer: C

The answer is C because inline layer can be defined as a rule action in a policy layer. Inline layer is a sub-policy that contains additional rules that are applied only if the parent rule matches. Ordered layer is a policy layer that contains rules that are applied in order, from top to bottom. One policy can be either inline or ordered, but not both. Pre-R80 Gateways do support ordered layers, but not inline layers
