QUESTION 1

Which command is used to add users to or from existing roles?

A. add rba user roles

B. add user

C. add rba user

D. add user roles

Correct Answer: A

The command add rba user roles is used to add users to or from existing roles. RBA stands for Role-Based Administration, which is a feature that allows administrators to assign different permissions and access levels to

users based on their roles.

QUESTION 2

What command from the CLI would be used to view current licensing?

A. license view

B. fw ctl tab -t license -s

C. show license -s

D. cplic print

Correct Answer: D

The command cplic print displays the installed licenses and their expiration dates on the CLI. References: Check Point CLI Reference Card

QUESTION 3

When should you generate new licenses?

A. Before installing contract files.

B. After an RMA procedure when the MAC address or serial number of the appliance changes.

C. When the existing license expires, license is upgraded or the IP-address where the license is tied changes.

D. Only when the license is upgraded.

Correct Answer: C

You should generate new licenses when the existing license expires, license is upgraded or the IP-address where the license is tied changes. These scenarios require a new license to be generated and activated on the Security Gateway or Management Server. Therefore, the correct answer is C. When the existing license expires, license is upgraded or the IP-address where the license is tied changes

QUESTION 4

Which SmartConsole application shows correlated logs and aggregated data to provide an overview of potential threats and attack patterns?

A. SmartEvent

B. SmartView Tracker

C. SmartLog

D. SmartView Monitor

Correct Answer: A

SmartEvent is a unified security management solution that provides real-time visibility into security events across the network. SmartEvent shows correlated logs and aggregated data to provide an overview of potential threats and attack patterns, as well as generate reports and alerts based on predefined or customized indicators. SmartView Tracker, SmartLog, and SmartView Monitor are other SmartConsole applications that can show logs, search queries, and network statistics respectively, but they do not provide the same level of correlation and analysis as SmartEvent. QUESTION 5

When installing a dedicated R80 SmartEvent server, what is the recommended size of the root partition?

A. Any size

B. Less than 20GB

C. More than 10GB and less than 20 GB

D. At least 20GB

Correct Answer: D

The correct answer is D because the recommended size of the root partition for a dedicated R80 SmartEvent server is at least 20GB. Any size, less than 20GB, or more than 10GB and less than 20GB are not sufficient for the SmartEvent server.
