**QUESTION 1**

Fill in the blank. To verify that a VPN Tunnel is properly established, use the command _____

Correct Answer: vpn tunnelutil

QUESTION 2

You have configured Automatic Static NAT on an internal host-node object. You clear the box Translate destination on client site from Global Properties > NAT. Assuming all other NAT settings in Global Properties are selected, what else must be configured so that a host on the Internet can initiate an inbound connection to this host?

- A. No extra configuration is needed.
- B. A proxy ARP entry, to ensure packets destined for the public IP address will reach the Security Gateway's external interface.
- C. The NAT IP address must be added to the external Gateway interface anti-spoofing group.
- D. A static route, to ensure packets destined for the public NAT IP address will reach the Gateway's internal interface.

Correct Answer: D

QUESTION 3

Which of the following tools is used to generate a Security Gateway R80 configuration report?

- A. fw cpinfo
- B. infoCP
- C. cpinfo
- D. infoview

Correct Answer: C

QUESTION 4

Paul has just joined the MegaCorp security administration team. Natalie, the administrator, creates a new administrator account for Paul in SmartDashboard and installs the policy. When Paul tries to login it fails. How can Natalie verify whether Paul's IP address is predefined on the security management server?

- A. Login to Smart Dashboard, access Properties of the SMS, and verify whether Paul's IP address is listed.
- B. Type cpconfig on the Management Server and select the option "GUI client List" to see if Paul's IP address is listed.
- C. Login in to Smart Dashboard, access Global Properties, and select Security Management, to verify whether Paul's IP address is listed.

D. Access the WEBUI on the Security Gateway, and verify whether Paul's IP address is listed as a GUI client.

Correct Answer: B

QUESTION 5

You are a Security Administrator who has installed Security Gateway R80 on your network. You need to allow a specific IP address range for a partner site to access your intranet Web server. To limit the partner's access for HTTP and FTP

only, you did the following:

1) Created manual Static NAT rules for the Web server.

2) Cleared the following settings in the Global Properties > Network Address Translation screen:

-Allow bi-directional NAT

-

Translate destination on client side Do the above settings limit the partner's access?

A.

Yes. This will ensure that traffic only matches the specific rule configured for this traffic, and that the Gateway translates the traffic after accepting the packet.

B.

No. The first setting is not applicable. The second setting will reduce performance.

C.

Yes. Both of these settings are only applicable to automatic NAT rules.

D.

No. The first setting is only applicable to automatic NAT rules. The second setting will force translation by the kernel on the interface nearest to the client.

Correct Answer: D
