**QUESTION 1**

Scenario: An application is NOT functioning as expected. The application was installed on a vDisk that has been placed in Standard mode. The vDisk is assigned to Desktop OS machines. Those Desktop OS machines have a 5 GB cache disk associated with them and the vDisk is configured to \\cache to RAM with overflow to disk\\. A Citrix Administrator attempted to view the Windows event logs from the previous week, but the logs only go back to the most recent restart. What should the administrator do to ensure that all logs are retained?

- A. Enable WINRM on the image.
- B. Change the location of the write cache.
- C. Use the write-eventlog PowerShell cmdlet.
- D. Change the path of the event logs to that of the write cache disk.

Correct Answer: D

QUESTION 2

Scenario: Users of the Human Resource (HR) user group report that one of their applications is NOT being personalized. A Citrix Administrator discovers that the application writes user-specific data in %programfiles%\HR\%username%. Which policy could the administrator configure to enable personalization of this application?

- A. Folders to mirror
- B. Path to user store
- C. Directories to synchronize
- D. Path to cross platform settings store

Correct Answer: C

QUESTION 3

Scenario: An organization has headquarters based in London and has branch offices in New York and Beijing. Citrix XenDesktop was recently implemented in the environment. All Desktop OS machines are located within the London

Datacenter while print servers are located in each branch office. Users have been complaining that printing from the branch offices is slow. All branches are connected through a Wide Area Network (WAN). QoS has been implemented for all

ICA/HDX traffic.

How could a Citrix Administrator optimize the printing performance for branch office users without asking for additional investments from management?

- A. Disable client auto-created printers.

- B. Disable direct connections to the print server.
- C. Increase the WAN link speed to the branch offices.
- D. Adjust printing bandwidth as part of the overall user session bandwidth limit.

Correct Answer: B

QUESTION 4

Scenario: When remote users attempt to log on through NetScaler Gateway, they are presented with the following error message:

\\Cannot Complete your Request.\\'

When the same users are in the office, they are able to log on successfully. What should a Citrix Administrator change to resolve this issue?

- A. The Callback URL to match the external URL of the NetScaler Gateway.
- B. The NetScaler Gateway Authentication method to '\\Enable Pass-through\\'.
- C. The StoreFront URL to match the external URL of the NetScaler Gateway.
- D. The External Beacon address to match the external URL of the NetScaler Gateway.

Correct Answer: B

QUESTION 5

Scenario: A Citrix Administrator uses Machine Creation Services to provision Desktop OS machines in an environment. The administrator needs to update an application that is locally installed on the Desktop OS machines. Which action should the administrator take after updating the application to ensure that users are provided with the updated application?

- A. Update the master image, then update the Delivery Group.
- B. Update the session machine catalog, then update the Delivery Group.
- C. Update the master image, then update the appropriate session machine catalog.
- D. Update the Desktop OS machines, then update the appropriate session machine catalog.

Correct Answer: C
