**QUESTION 1**

Scenario: A Citrix Administrator configures an access control list (ACL) to block traffic from the IP address 10.102.29.5:

```
add simpleacl rule1 DENY -srcIP 10.102.29.5
```

A week later, the administrator discovers that the ACL is no longer present on the Citrix ADC.

What could be the reason for this?

- A. The administrator did NOT run the apply ACL command.
- B. The simple ACLs remain active for only 600 seconds.
- C. The simple ACLs remain active for only 60 seconds.
- D. The Citrix ADC has been restarted without saving the configurations.

Correct Answer: A

---

**QUESTION 2**

Which Citrix Gateway feature should a Citrix Administrator configure to allow traffic for specific iOS applications only?

- A. Full SSL VPN tunnel for iOS
- B. Per app VPN tunnel
- C. Split DNS
- D. SmartControl for iOS

Correct Answer: B

---

**QUESTION 3**

What is a recommended practice for managing a Citrix ADC high availability (HA) pair to ensure that management changes are always made on the primary Citrix ADC?

- A. Enable USIP on both nodes (primary and secondary).
- B. Connect to both Citrix ADCs to see which one is the primary.
- C. Enable management access to a SNIP.
- D. Enable management access on the Cluster IP (CLIP) address.

Correct Answer: C

---

#### QUESTION 4

Scenario: While attempting to access a web server that is load-balanced by a Citrix ADC using HTTPS, a user receives the message below:

SSL/TLS error: You have not chosen to trust "Certificate Authority" the issuer of the server\'s security certificate.

What can a Citrix Administrator do to prevent users from getting this message?

- A. Ensure that the server certificate is linked to its respective intermediate and root certificates.
- B. Ensure that users have the server certificate installed.
- C. Ensure that users have the certificate\'s private key.
- D. Ensure that users have the certificate\'s public key.

Correct Answer: A

---

#### QUESTION 5

Scenario: A Citrix Administrator manages an environment that has three SSL websites, all serving the same content.

www.company.com www.company.net www.company.org

The administrator would like to consolidate the websites into a single, load-balanced SSL virtual server.

What can the administrator bind to use a single SSL virtual server?

- A. The certificate of each website to a single SSL virtual server
- B. A wildcard certificate to a single SSL virtual server
- C. A multiple SAN certificate to a single SSL virtual server
- D. A wildcard certificate to a content-switching virtual server

Correct Answer: C
