QUESTION 2

Scenario: A Citrix XenApp Administrator plans to integrate a new application. This application is profiled to be streamed to a group of users and will be published to be streamed to the client.

Some users are able to launch the streamed application but a few of them are NOT able to do so. What could cause this issue?

- A. The administrator did NOT install Citrix Receiver.
- B. The administrator did NOT configure Citrix Receiver.
- C. The administrator did NOT install the Citrix Offline Plug-in.
- D. The administrator did NOT configure the Citrix Offline Plug-in.

Correct Answer: C

QUESTION 3

Scenario: A Citrix Engineer is designing a Provisioning Services environment based on the following environmental factors:

1.
All target devices are part of a single subnet.
2.
The subnet is shared with other non-Provisioning Services machines which rely on starting up over the network.
- 3.

Microsoft-based supporting infrastructure is available on the subnet.

4.

The fewest number of steps are required for implementation.

Which Provisioning Services startup method is appropriate for the target devices?

- A. BIOS Embedded
- B. BDM ISO
- C. PXE
- D. DHCP Options

Correct Answer: B

QUESTION 4

Which two requirements are needed for the target devices contained in a device collection to function successfully? (Choose two.)

- A. All target devices in the device collection must be accessible to the same user and/or user groups.
- B. All target devices in the device collection must have an Active Directory machine account which is managed by Provisioning Services.
- C. All target devices in the device collection must be located in the same XenApp and XenDesktop Site.
- D. All target devices in the device collection must be assigned at least one vDisk.
- E. All target devices in the device collection must be running from the same Operating System.

Correct Answer: BD

QUESTION 5

Scenario: A Citrix Engineer is troubleshooting a database-related issue in a XenDesktop Site. The engineer tested the connectivity between the Delivery Controller and SQL server by doing a ping test and verifying the firewall rules. Now the engineer wants to check the number of registered service instances

with the directory.

Which PowerShell command should the engineer execute?

- A. Get-ConfigServiceInstance
- B. Test-ConfigServiceInstanceAvailability
- C. Register-ConfigServiceInstance
- D. Get-ConfigRegisteredServiceInstance

Correct Answer: D
