**QUESTION 1**

Scenario: CGE decided to virtualize its infrastructure workloads and provide a virtual solution to all end users. The infrastructure workloads include Delivery Controllers, StoreFront servers, License Servers, and Microsoft SQL Servers for databases. Why is creating a resource pool comprising a maximum of 32 XenServer hosts, using a virtual disk storage repository for XenMotion and high availability, and replicating and performing backups for the meta information the best design solution?

- A. It addresses all customer requirements by ensuring appropriate design of resource pools, high availability for critical workloads, and a new storage solution for disaster recovery purposes.
- B. It ensures simple setup with a built-in failover design.
- C. It allows virtual workloads to fail over to a failover site for disaster recovery purposes.
- D. It optimizes performance and provides centralized management.

Correct Answer: A

QUESTION 2

Scenario:

A Citrix Architect is asked to design a new external access architecture for CGE. The regional datacenters have NetScaler appliances delivering load-balancing services. Security policy mandates that these internal appliances CANNOT connect to the DMZ.

How should the architect configure the callback URL with a high availability pair of NetScalers located in all three regional datacenters?

- A. Configure the callback URL to point to the local NetScaler, and configure the Secure Ticket Authority (STA) to point to the local Delivery Controllers.
- B. Configure the callback URL to point to the external address, <https://secure.cge.com>, and configure the
- C. Secure Ticket Authority (STA) to point to the local Delivery Controllers.
- D. Configure the callback URL to point to the FQDN of the local NetScaler Gateway, and configure the Secure Ticket Authority (STA) to point to the local Delivery Controllers.
- E. Configure the callback URL to point to the external beacon address.

Correct Answer: D

QUESTION 3

Which tool should the architect use in preparation for migration to Windows Server 2012 to determine application compatibility and suitability for virtualization?

- A. AppDNA

- B. App-V Sequencer
- C. EdgeSight for End Points
- D. Windows Upgrade Advisor

Correct Answer: A

QUESTION 4

A Citrix Administrator is unable to create desktop OS machines using Machine Creation Services. What is a possible cause of the issue?

- A. Citrix Director is unreachable
- B. DHCP is NOT working correctly
- C. The Machine Identity Service is NOT running
- D. Antivirus software on the Delivery Controller is blocking the creation

Correct Answer: C

QUESTION 5

Why would the architect choose XenServer MPIO when configuring network interfaces for storage networks?

- A. It provides load balancing of VM traffic across multiple physical NIC interfaces at a per guest basis, and offers improved distribution of traffic across physical interfaces in the bond.
- B. It sends all guest VM traffic in the bond to an active interface, which provides the best distribution of network load.
- C. It uses a hashing algorithm, which provides better distribution of traffic across the interfaces in the bond.
- D. It uses a round robin load-balancing policy, which provides better distribution of traffic across the interfaces in the bond.

Correct Answer: C
