-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

Scenario: A Citrix Architect needs to implement XenDesktop in an environment. The Customer Service team processes credit card information in Web applications. A Payment Card Industry (PCI) audit determines that processes that can run on a Virtual Delivery Agent (VDA) machine are controlled through the use of whitelisting.

Which method would be an appropriate fit for the environment, based on the requirements?

- A. Citrix Secure Browser
- B. NTFS Permissions
- C. Microsoft App-V
- D. Citrix Workspace Environment Management

Correct Answer: D

---

**QUESTION 2**

A Citrix Architect needs to conduct a capabilities assessment for an organization that wants to design and build a new XenApp and XenDesktop environment.

Which four capabilities will directly influence whether the existing Citrix administrative team will have the capacity to support the new environment? (Choose four.)

- A. Network architecture
- B. Current backup solutions
- C. Users and applications
- D. Existing XenApp and XenDesktop environments
- E. Training and certifications of support staff and users
- F. Current storage solutions
- G. Image management processes

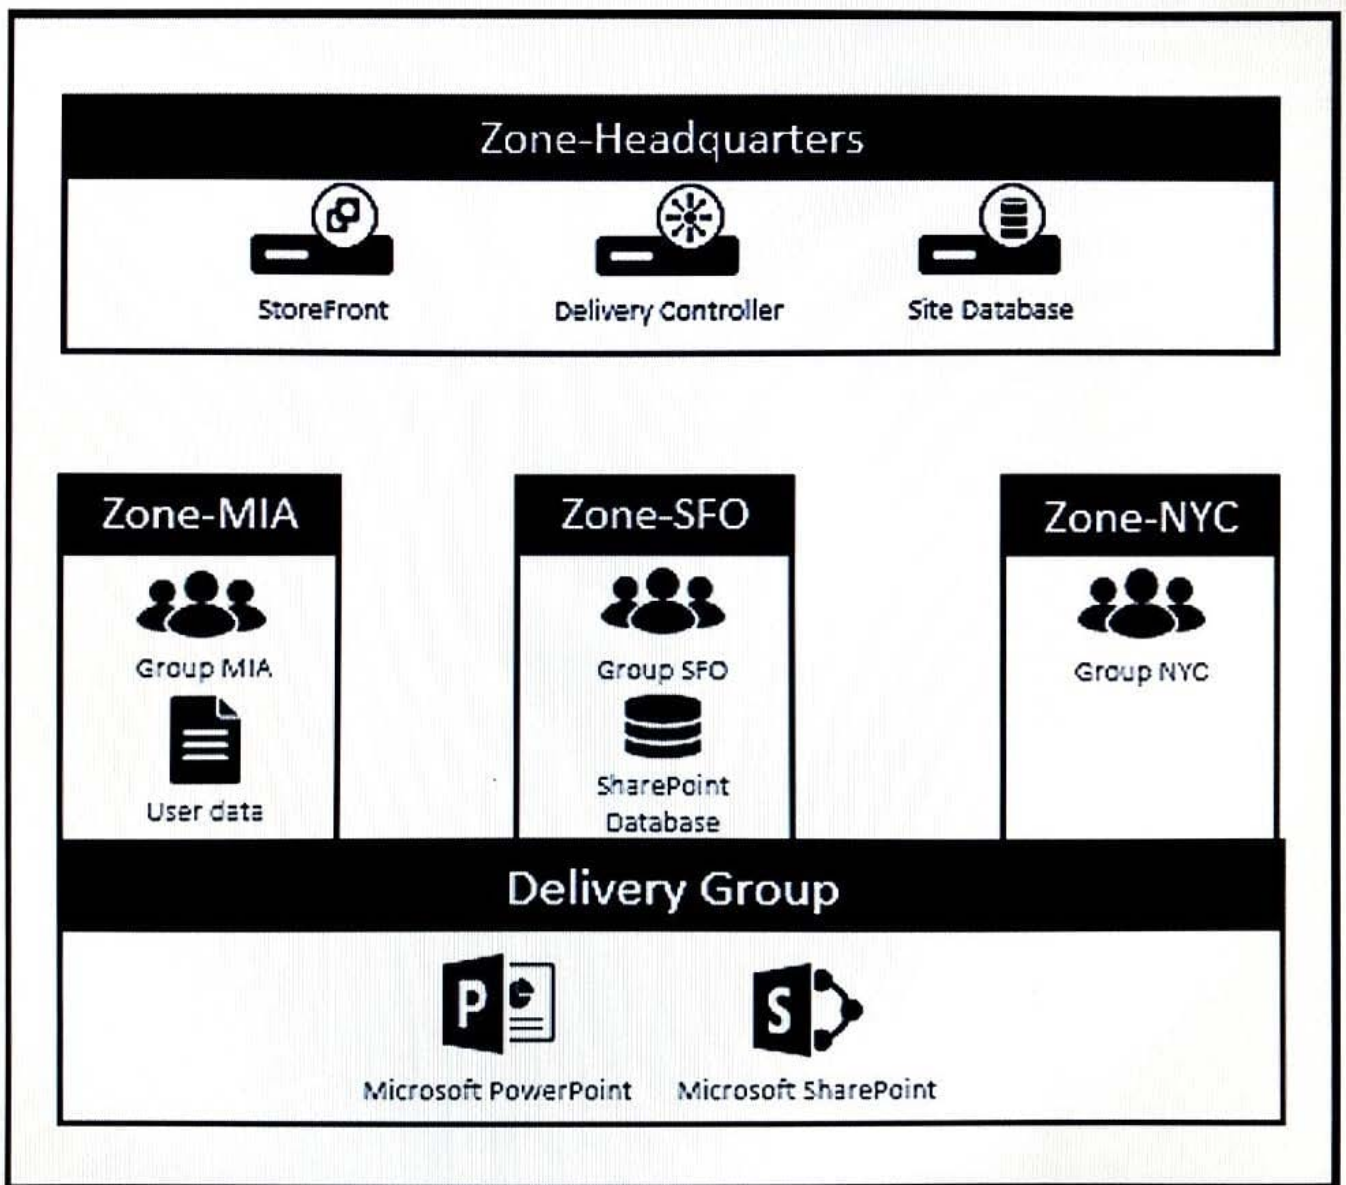

Correct Answer: ACDF

---

**QUESTION 3**

Scenario: A Citrix Architect needs to design a new XenApp and XenDesktop environment. The design has a primary zone and three satellite zones. Each satellite zone has a number of Virtual Delivery Agent (VDA) machines that belong to a single Delivery Group spanning across all three satellite zones.

Click the Exhibit button for more details about the configuration.

How should the architect ensure that when users from Group SFO launch Microsoft PowerPoint, they are able to work with the least amount of latency on documents in the "User data" folder?

- A. Publish Microsoft PowerPoint to only run from Zone-SFO
- B. Set the application home zone to Zone-MIA
- C. Create a Citrix policy to define bandwidth limitations for sessions to Zone-SFO
- D. Edit the zone properties to only allow Microsoft PowerPoint to launch in Zone-MIA

Correct Answer: D

#### QUESTION 4

Scenario: A Citrix Architect needs to design a new XenApp and XenDesktop environment.

The architect has identified the User Layer requirements, as shown in the Exhibit.

Click the Exhibit button to view the requirements.

User Group	User Devices	Connection Point	Security Requirements
<b>Accountants</b>	Corporate-owned desktops, laptops	Internal	Should minimize user effort required to authenticate while meeting general security requirements
<b>Executives</b>	BYOD smartphones, tablets	Internal and External	Should minimize user effort required to authenticate while meeting general security requirements
<b>Customers</b>	Public kiosks	Internal	Use kiosks to access a published app hosted by a group of servers in an isolated network segment  Should NOT have knowledge of Workspace Services credentials
<b>Contractors</b>	BYOD desktops, laptops	External	User devices must have up-to-date antivirus software installed before they can access the XenApp and XenDesktop environment.  Should NOT have knowledge of Workspace Services credentials and must supply their own authentication provider

Additionally, management at the organization has identified the following general Access Layer requirements:

A multi-factor authentication method is required for any connections to the XenApp and XenDesktop environment originating from outside the corporate network.

External connections must be authenticated by a NetScaler Gateway virtual server located in a DMZ network.

Internal connection traffic should NOT leave the internal corporate network.

Which two authentication methods should the architect use for the Contractors group? (Choose two.)

- A. RADIUS authentication
- B. Smart Cards
- C. SAML authentication
- D. Domain pass-through
- E. Federated Authentication Service
- F. Username and password

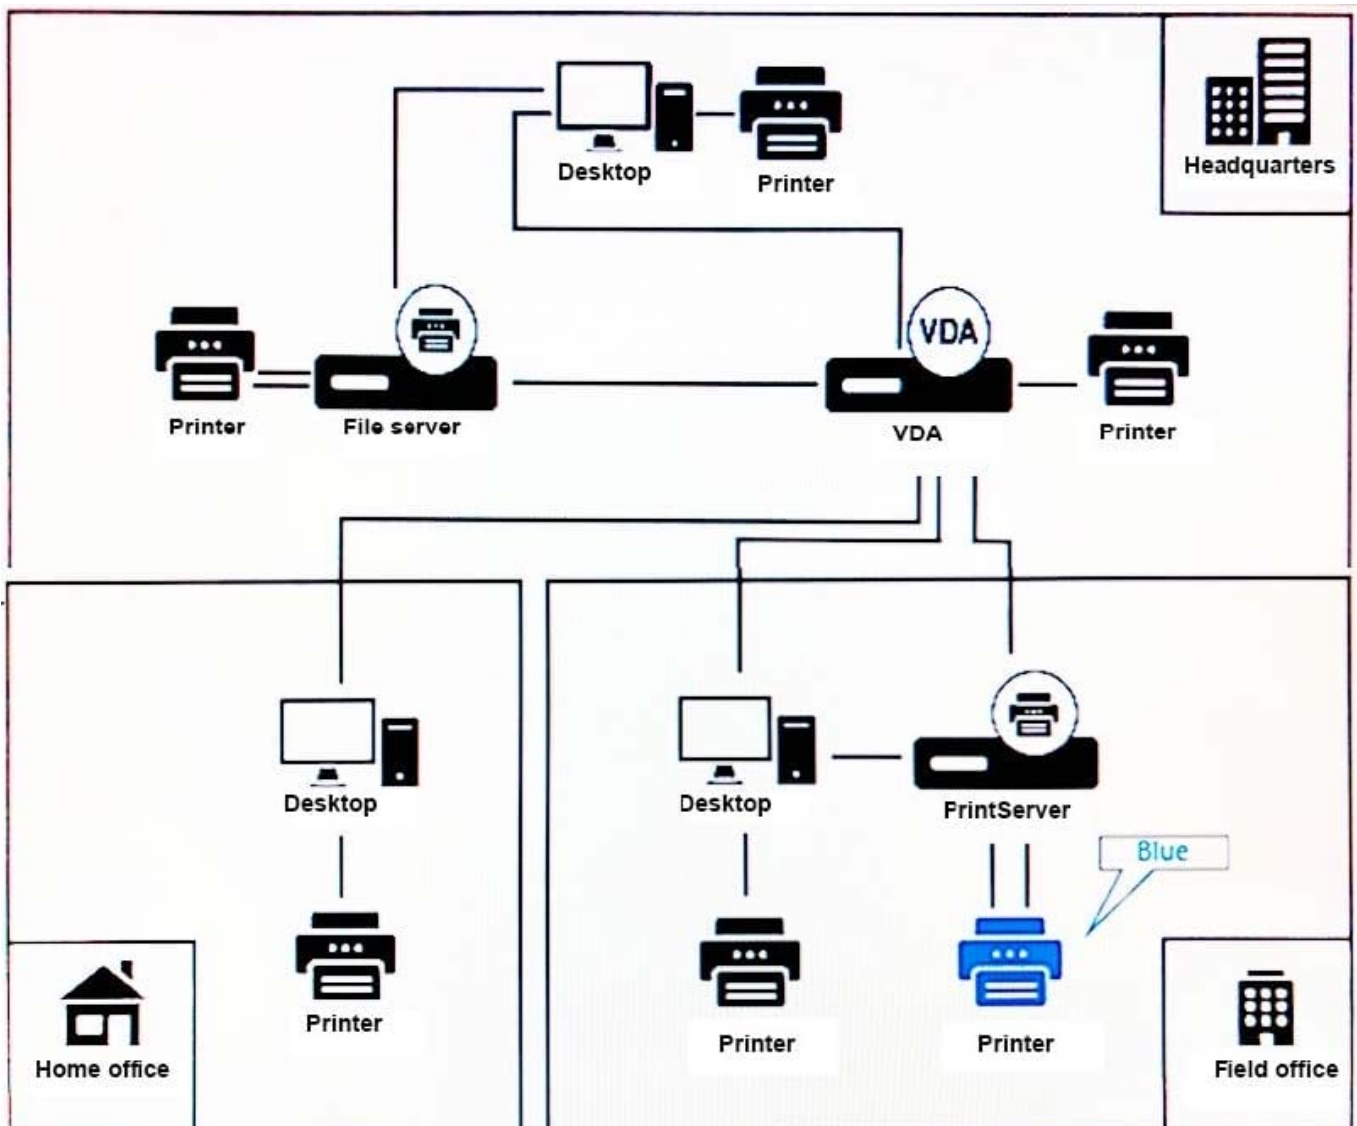

Correct Answer: CE

### QUESTION 5

Scenario: A Citrix Architect needs to design a new XenApp and XenDesktop environment. The customer has a number of small field sales offices, each connected to the main datacenter located in the headquarters building that has a 1.5 Mbps MPLS WAN link. Each field sales office has between 5 and 10 concurrent users connecting to the Citrix environment hosted in the main datacenter.

Click the Exhibit button to view additional details about the environment.

While setting up a new field office, the architect discovers that the printer marked in blue in the Exhibit is showing up in a user's session without the architect having configured any policies or printer mapping for this user or printer.

Which functionality and printing pathway is making the printer available to the user?

A. Citrix Universal Print Server, Network printing pathway

- B. Session printer, Network printing pathway
- C. Citrix Universal Print Server, Client printing pathway
- D. Session printer, Client printing pathway
- E. Auto-created Client printer, Client printing pathway
- F. Auto-created Client printer, Network printing pathway

Correct Answer: A
