**QUESTION 1**

An administrator should enable high availability on a XenServer pool when . (Choose the correct option to complete the sentence.)

- A. additional backup of virtual machines is needed
- B. workload balancing between servers in a pool is needed
- C. application(s)/server(s) are accessed 24 hours a day, 7 days a week
- D. virtual machines hosted on a pool need access to iSCSI shared storage

Correct Answer: C

QUESTION 2

An administrator notices that the target device is NOT starting from a newly created vDisk, but other target devices using different vDisks are working.

Which action can the administrator take to correct this issue?

- A. Restart the Stream Service.
- B. Enable streaming on the vDisk.
- C. Reset the Active Directory machine account password.
- D. Change the vDisk access mode to Private Image mode.

Correct Answer: B

QUESTION 3

Scenario: An administrator realizes that the XenServer pool master has experienced an unrecoverable issue and crashed over the weekend. High availability is currently disabled.

Which command must the administrator run on the XenServer CLI of a pool member to recover the XenServer pool?

- A. `xe pool-ha-enable`
- B. `xe pool-recover-slaves`
- C. `xe pool-designate-new-master`
- D. `xe pool-emergency-transition-to-master`

Correct Answer: D

**QUESTION 4**

Scenario: An administrator needs to create a single resource pool containing six XenServer hosts. All hosts have the same CPU manufacturer, but different CPU model.

Which two host parameters need to be the same across all hosts to create a heterogeneous resource pool? (Choose two.)

- A. Time zone
- B. Usable memory
- C. Installed hotfixes
- D. XenServer version

Correct Answer: CD

QUESTION 5

Scenario: An administrator is delivering Windows virtual machines using Provisioning services. The administrator needs to reduce the impact on Provisioning services disk consumption as well as maintain user operating system modifications.

Which cache mode must be used in this scenario?

- A. Cache on Server
- B. Cache in Device RAM
- C. Cache on Server Persisted
- D. Cache on Device Hard Drive Persisted

Correct Answer: D
