**QUESTION 1**

Scenario: An administrator tries to start a virtual machine on a host that has an NFS storage repository. The virtual machine gives the error "This virtual machine needs storage that cannot be seen from the server."

Which action, within XenCenter, can the administrator take on the NFS storage repository to correct this issue?

- A. Repair
- B. Forget
- C. Detach
- D. Set as default

Correct Answer: A

---

**QUESTION 2**

Scenario: A XenServer pool consists of two XenServer hosts that each have four network interface cards (NICs). The first two NICs form a bond that is used for management and virtual machine network traffic. The other two NICs are unused. The administrator notices that the system is using all available network bandwidth and iSCSI disk performance is being affected.

Which network type could the administrator create to move the storage traffic to one of the unused NICs?

- A. Bonded
- B. Management
- C. Cross-server private
- D. Single-server private

Correct Answer: B

---

**QUESTION 3**

Scenario: An administrator is unable to connect to a resource pool in a XenServer environment in which high availability is enabled. The administrator discovers that the host is unreachable.

What does the administrator need to do to recover the host?

- A. Run the pool-disable command, then the host-shutdown command and then restart the host.
- B. Run the pool-disable command, then run the pool-emergency-reset-master command and restart the host.
- C. Run the emergency-ha-disable command, then once the host is restarted, run the pool-ha- enable command.
- D. Run the host-evacuate command, then restart the host and run the pool-emergency- transition- to-master command.

Correct Answer: C

---

#### QUESTION 4

What is the last step required to enable the offline database within Provisioning services?

- A. Enable auditing.
- B. Enable automatic merge.
- C. Restart the SOAP Service.
- D. Restart the Stream Service.

Correct Answer: D

---

#### QUESTION 5

Scenario: An administrator needs to ensure that all virtual machine traffic transmits over a specified VLAN. The XenServer host has two network interface cards, one for management and the other for virtual machine traffic.

Which network type must the administrator create on a XenServer host to allow access to the specified VLAN?

- A. Bonded
- B. External
- C. Cross-server private
- D. Single-server private

Correct Answer: B
