QUESTION 1

What is the last step required to enable the offline database within Provisioning services?

A. Enable auditing.

B. Enable automatic merge.

C. Restart the SOAP Service.

D. Restart the Stream Service.

Correct Answer: D

QUESTION 2

Scenario: An administrator needs to install Windows Server 2008 R2 on a new virtual machine. The Windows Server 2008 R2 ISO file is located on a Windows share.

Which storage repository does the administrator need to create to be able to mount the ISO file to the new virtual machine?

A. iSCSI

B. CIFS

C. NFS ISO

D. StorageLink

Correct Answer: B

QUESTION 3

Scenario: An administrator needs to ensure that the XenServer pool database in a two- server pool is highly available. However, one of the XenServer hosts has failed and is NOT recoverable. The administrator now must re-establish high availability using a new host. The existing host has taken the master role.

Which step should the administrator take to recover the backup pool information to the new XenServer host and ensure that it is highly available with the existing XenServer master?

A. Add the new host to the existing pool.

B. Restore the pool metadata to the new host.

C. Restore the pool metadata to the running host.

D. Create a new pool and restore the metadata to the new host.

Correct Answer: A

QUESTION 4

An administrator noticed that a storage repository is unable to attach or be repaired in the XenCenter console.

Which command can the administrator run in the XenServer CLI to reconnect the storage repository?

A. xe sr-scan

B. xe sr-probe

C. xe pbd-plug

D. xe pbd-unplug

Correct Answer: C

QUESTION 5

Scenario: An administrator built four new hosts in an existing XenServer pool that already has multiple hosts connected to a shared storage over Fibre Channel. The administrator discovered that the new hosts are NOT able to connect to the existing storage repositories.

Which two steps can the administrator take to resolve the issue? (Choose two.)

A. Check the log files.

B. Recreate the storage repositories.

C. Verify that the LUNs are mapped and zoned correctly.

D. Convert the storage repositories to shared storage repositories.

Correct Answer: AC
