-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

Which two are true about the use of DBFS in a Database Machine environment?

- A. DBFS must be used to bulk load data into a database on the Database Machine if the staging area requires Exadata based shared storage.
- B. DBFS must be used to have a POSIX compliant shared storage solution that is accessible from the database servers on a Database Machine.
- C. DBFS must be used to bulk load data into a production database on the Database Machine.
- D. DBFS must use the DBFS\_DG diskgroup for any DBFS store.
- E. DBFS must be used to have a POSIX-compliant Exadata-based shared storage solution.

Correct Answer: AB

Note:

\*external tables on DBFS file-systems provide the probably the most high-performance way to bulk load data into your database.

---

**QUESTION 2**

To guarantee proper cooling, you plan to place perforated floor tiles near your Database Machine.

Where, in relation to the cabinet, should they be placed?

- A. On the left side, because the air flow is from left to right
- B. At the back, because the air flow is from back to front
- C. On the right side, because the air flow is from right to left.
- D. At the front, because the air flow is from front to back
- E. Underneath the cabinet, because the air flow is from bottom to top

Correct Answer: D

Explanation: Airflow must be front-to-back.

Reference: Oracle White Paper, ORACLE Exadata Database Machine X3-8

---

**QUESTION 3**

You have used setupem.sh to deploy a plug in for Grid Control.

In which two ways do all the targets supported by the plug-in get configured?

- A. The targets must be configured by an Enterprise Manager administrator manually using Grid Control.
- B. Setupem.sh is used again to configure the targets.
- C. The targets must be configured by an O/S administrator manually.
- D. The targets must be configured by a database administrator manually.
- E. There may be more than one target for each plug-in.

Correct Answer: AE

After running the `setupem.sh` script:

- The Cloud Control OMS and Repository will be installed
  - The Exadata plug-ins are deployed on the OMS
- 

---

#### QUESTION 4

You plan to migrate a database supporting an anOLTP workload to your Database Machine

This is part of a consolidation project and several other databases already exist on the Database Machine.

Which three Exadata features may help to improve the performance of this OLTP workload?

- A. Hybrid Columnar Compression
- B. I/O Resource Manager
- C. Smart Flash Cache
- D. Smart Flash Log
- E. Smart Scan
- F. Storage Index

Correct Answer: BCD

Explanation: C: OLTP performance benefits with Exadata / (D) Smart flash log for low latency commits / (C) Smart flash cache for low latency reads. KEEP in Flash for critical objects

---

#### QUESTION 5

You configuring has two half racks, one with high capacity disks and other with high performance disks and high capacity expansion half rack.

There are two RAC clusters, one on each half rack, which have separate storage grids, each consisting of some of the storage servers in the configuration.

You are planning your deployment of Enterprise Manager to monitor all the components of this multi-rack Database Machine, and must provide for high availability of the monitoring infrastructure.

If the host running the agent which has database machine targets bound to it fails, the monitoring of these targets must be another agent.

Which two are true regarding the configuration used to support this?

- A. Enterprise manager support must be deployed to only one Enterprise Manager Agent in each cluster.
- B. A secondary agent must be deployed on a database server in the same cluster as the server hosting the primary agent.
- C. Enterprise Manager support must be deployed to all Enterprise Manager Agents in each cluster.
- D. A secondary agent may be deployed on a database server in a different cluster than the server hosting the primary agent.
- E. A secondary agent must be deployed on a database server in a different cluster than the server hosting the primary agent.
- F. Enterprise Manager support must be deployed to at least two Enterprise Manager Agents in each of the two RAC clusters.

Correct Answer: AD

Note:

\*Instructions for configuring a high availability solution for the Exadata Storage cell or any other Exadata plug-in are documented in the Oracle Database Machine Monitoring Best Practices (Doc ID 1110675.1) document located in My Oracle

Support \*High Availability for Plug-Ins

Normally a plug-in target is bound to a specific agent. If the agent is down, the target cannot be monitored. A procedure exists to facilitate target failover to a secondary agent.

\*The Enterprise Manager agent must be deployed to all compute nodes of the Exadata Database Machine.

\*The Oracle ILOM plug-in monitors the Oracle ILOM service processor in a compute node for hardware events and records sensor data to the Oracle Enterprise Manager Repository.

The ILOM plug-in is deployed to the Enterprise Manager (EM) Agent on the first compute node in an Oracle Database Machine, and only that EM agent communicates with the EM Management Server and Repository for all ILOM database

server service processors in the Oracle Database Machine.

\*OEM Agent and Exadata Plug-ins

1. OEM Agent and Plug-Ins are deployed under Oracle Home
2. Agent incorporates additional functionality in Plug-In
3. Agent and Plug-in DB Server on Exadata DBM
3. Agent and Plug-in communicates with Storage Server

- 4. Plug-Ins are available for monitoring all Exadata hardware components
- 5. OEM Agent communicates with the OEM
