QUESTION 1

View the Exhibit to examine the output produced by the following query at three different times since the database instance started and has undergone workloads of different capacities:

SQL> SELECT substr(component, 0,10) COMP, current_size CS, user_specified_size US FROM v$memory_dynamic_components

WHERE current_size!=0;

```
shared poo                              58720256              0
large pool                               4194304              0
java pool                                4194304              0
SGA Target                             176160768              0
DEFAULT bu                             100663296              0
Shared IO                                8388608        8388608
PGA Target                             117440512              0

6 rows selected.

Second execution:
==================
COMP                                          CS             US
----------                          ----------     ----------
shared poo                              58720256              0
large pool                               4194304              0
java pool                                4194304              0
SGA Target                             192937984              0
DEFAULT bu                             117440512              0
Shared IO                                8388608        8388608
PGA Target                             100663296              0

6 rows selected.

Third execution:
==================
COMP                                          CS             U
----------                          ----------     ----------
shared poo                              62914560              0
```

What do you infer from this?

A. The database instance is running with manual PGA management.

B. The database instance is running with manual shared memory management.

C. The database instance has the MEMORY_TARGET value set to a nonzero value.

D. All sessions are connected to the database instance in dedicated mode, and no RMAN or parallel query operations have been performed.

Correct Answer: C

QUESTION 2

You are working on a CATDB database that contains an Oracle Database version 11.1 catalog schema owned by the userRC011. The INST1 database contains an Oracle Database version 10.1 catalog schema owned by the user RCAT10.

You want the RMAN to import metadata for database IDs 1423241 and 1423242, registered in RCAT10, into the recover catalog owned by RC011. You also want to deregister them from the catalog after import.

You executed the following commands to achieve this:

RMAN> CONNECT CATALOG rco1 1/password@catdb

RMAN> IMPORT CATALOG rcat1 0/oracle@inst1 DBID=1423241,1423242;

What happens if the RC011 catalog has scripts with the same name as that of the scripts in RCAT10 catalog?

A. The scripts in the RC011 catalog are overwritten.

B. RMAN renames the local stored scripts in the RC011 catalog.

C. The RMAN session in which the command is executed aborts.

D. RMAN renames the global scripts that are imported from the RCAT10 catalog.

Correct Answer: D

QUESTION 3

Which statements are true regarding table compression? (Choose all that apply.)

A. It requires uncompress operation during I/O.

B. It saves disk space and reduces memory usage.

C. It saves disk space but has no effect on memory usage.

D. It incurs extra CPU overhead during DML but not direct loading operations.

E. It incurs extra CPU overhead during DML as well as direct loading operations.

Correct Answer: BE

QUESTION 4

SQL> EXECUTE

DBMS_WORKLOAD_REPOSITORY.CREATE_BASELINE_TEMPLATE(START_TI ME=>
TO_TIMESTAMP(SYSDATE+2),

END_TIME=>TO_TIMESTAMP(SYSDATE+10),

BASELINE_NAME=>\\'Mybase4\\',

TEMPLATE_NAME=>\\'Mytemp4l,

EXPIRATION=>NULL);

Which statement is true about the effect of the above command?

A. It creates a baseline template that never expires.

B. It produces an error because no snapshot information is provided to create the baseline.

C. It creates a baseline template that expires after the Automatic Workload Repository (AWR) retention period.

D. It creates a repeating baseline template that repeats after the Automatic Workload Repository (AWR) retention period.

Correct Answer: A

QUESTION 5

Which statements are true regarding SecureFile LOBs? (Choose all that apply.)

A. The amount of undo retained is user controlled.

B. SecureFile LOBs can be used only for nonpartitioned tables.

C. Fragmentation is minimized by using variable-sized chunks dynamically.

D. SecureFile encryption allows for random reads and writes of the encrypted data.

E. It automatically detects duplicate LOB data and conserves space by storing only one copy.

Correct Answer: CD
