QUESTION 1

The tnsnames.ora file has an entry for the service alias ORCL as follows:

ORCL =

(DESCRIPTION =

(ADDRESS = (PROTOCOL = TCP)(HOST = 10.156.24.216)(PORT = 1521))

(CONNECT_DATA =

(SERVER = DEDICATED)

(SERVICE_NAME = orcl.oracle.com)

)

)

The TNSPING command executes successfully when tested with ORCL, but you are not able to connect to

the database instance with the following command:

SQL> CONNECT scott/tiger@orcl

What could be the reason for this?

A. The listener is not running on the database node.

B. The TNS_ADMIN environmental variable is set to a wrong value.

C. The orcl.oracle.com database service is not registered with the listener.

D. The DEFAULT_DOMAIN parameter is set to a wrong value in the sqlnet.ora file.

Correct Answer: C

QUESTION 2

Examine these components: Execution plan for a non-embedded SQL statement Local, global, and package variables for a session Execution plan for a SQL statement contained in a PL/SQL program unit Results of executed queries and query fragments PL/SQL function result sets

Which of these are stored in the shared SQL area?

A. 1, 2, 4, and 5

B. 1, 2, and 3

C. 1 and 4

D. 1 and 3

Correct Answer: D

QUESTION 3

While observing the index statistics, you find that an index is highly fragmented, thereby resulting in poor database performance. Which option would you use to reduce fragmentation without affecting the users who are currently using the index?

A. Validate the index structure using the ANALYZE .... INDEX command

B. Rebuild the index using the ALTER INDEX ..... REBUILD ONLINE command

C. Change the block space utilization parameters using the ALTER INDEX command

D. Deallocate the unused space in the index using the ALTER INDEX ... DEALLOCATE UNUSED command

Correct Answer: B

QUESTION 4

Which two statements are true about checkpointing? (Choose two.)

A. The checkpoint frequency decreases with the smaller redo log file size.

B. It ensures that all committed data is written to the data files during normal shutdown.

C. The frequent full checkpoint in a database can cause the overall degradation of the database performance.

D. It prompts the Checkpoint (CKPT) process to write data to the data files and redo information to the online redo log files.

Correct Answer: BC

QUESTION 5

Which two statements are true regarding listeners? (Choose two.)

A. Listeners use only the TCP/IP protocol.

B. Multiple listener processes can run simultaneously on a host.

C. Multiple database instances can be registered with a single listener.

D. The listener-related errors can be traced only at the administrative level.

E. Only one database instance can be registered with a single listener at any time.

Correct Answer: BC
