100% Passing Guarantee
100% Money Back Assurance

Following Questions and Answers are all new published by Oracle
Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

In an Oracle Machine Learning notebook, which is the correct syntax for starting a SQL script in Scratchpad?

- A. #sql
- B. Ssql
- C. %sql
- D. @sql

Correct Answer: C

QUESTION 2

In which format is an Oracle Machine Learning Notebooks notebook saved or exported?

- A. JSON
- B. XML
- C. CSV
- D. custom binary format

Correct Answer: A

QUESTION 3

You are creating a job that should run a notebook every hour. You want to make sure that the job does not run repeatedly if there are more than five consecutive failures to run the job.

Which option should you set while creating the job?

- A. Minimum Failure Allowed
- B. Maximum Number of Runs
- C. Maximum Failure Allowed
- D. Timeout in Minutes

Correct Answer: A

QUESTION 4

Which two statements are true about supervised machine learning?

- A. There is no previously known result to guide the algorithm in building the model.
- B. It does not specify a target, it can be applied to a population of interest.
- C. It is used to extract meaningful insights from raw data to improve data operational efficiency.
- D. It generally results in predictive models.
- E. The learning process is directed by a previously known dependent attribute or target.

Correct Answer: DE

Explanation: Supervised learning is also known as directed learning. The learning process is directed by a previously known dependent attribute or target. Directed data mining attempts to explain the behavior of the target as a function of a set of independent attributes or predictors. Supervised learning generally results in predictive models. This is in contrast to unsupervised learning where the goal is pattern detection. The building of a supervised model involves training, a process whereby the software analyzes many cases where the target value is already known. In the training process, the model "learns" the logic for making the prediction. For example, a model that seeks to identify the customers who are likely to respond to a promotion must be trained by analyzing the characteristics of many customers who are known to have responded or not responded to a promotion in the past.

QUESTION 5

Which two Oracle Cloud services are Integrated with Oracle Machine Learning?

- A. Oracle Stream Analytics
- B. Oracle Analytics Cloud
- C. Oracle Autonomous Database
- D. Oracle GoldenGate

Correct Answer: AC
