**QUESTION 1**

When creating an OCI Vault, which factors may lead to select the Virtual Private Vault? Select TWO correct answers

- A. Need for more than 9211 key versions
- B. Greater degree of isolation
- C. To mask PII data for non-production environment
- D. Ability to back up the vault

Correct Answer: BD

VAULTS

Vaults are logical entities where the Vault service creates and durably stores keys and secrets. The type of vault you have determines features and functionality such as degrees of storage isolation, access to management and encryption, scalability, and the ability to back up. The type of vault you have also affects pricing. You cannot change a vault's type after you create the vault.

The Vault service offers different vault types to accommodate your organization's needs and budget. All vault types ensure the security and integrity of the encryption keys and secrets that vaults store. A virtual private vault is an isolated partition on a hardware security module (HSM). Vaults otherwise share partitions on the HSM with other vaults.

Virtual private vaults include 1000 key versions by default. If you don't require the greater degree of isolation or the ability to back up the vault, you don't need a virtual private vault. Without a virtual private vault, you can manage costs by paying for key versions individually, as you need them. (Key versions count toward your key limit and costs. A key always contains at least one active key version. Similarly, a secret always has at least one secret version. However, limits on secrets apply to the tenancy, rather than a vault.)

The Vault service designates vaults as an Oracle Cloud Infrastructure resource.

QUESTION 2

What must be configured for a load balancer to accept incoming traffic?

- A. Service Gateway
- B. SSL certificate
- C. Listener
- D. Route table entry pointing to the listener IP address

Correct Answer: C

A listener is an entity that checks for connection requests. The load balancer listener listens for ingress client traffic using the port you specify within the listener and the load balancer's public IP.

<https://docs.oracle.com/en-us/iaas/Content/GSG/Tasks/loadbalancing.htm> To create a listener:

On your Load Balancer Details page, click Listeners.

Click Create Listener.

Enter the following:

Click Create.

QUESTION 3

On which option do you set Oracle Cloud Infrastructure Budget?

- A. Compartments
- B. Instances
- C. Free-form tags
- D. Tenancy

Correct Answer: A

How Budgets Work

Budgets are set on cost-tracking tags or on compartments (including the root compartment) to track all spending in that cost-tracking tag or for that compartment and its children.

<https://docs.oracle.com/en-us/iaas/Content/Billing/Concepts/budgetsoverview.htm>

QUESTION 4

Which Cloud Guard component identifies issues with resources or user actions and alerts you when an issue is found?

- A. Problems
- B. Targets
- C. Detectors
- D. Responders

Correct Answer: C

Detector Performs checks to identify potential security problems based on activities or configurations. Rules followed to identify problems are the same for all compartments in a target. <https://docs.oracle.com/en-us/iaas/cloud-guard/using/part-start.htm>

QUESTION 5

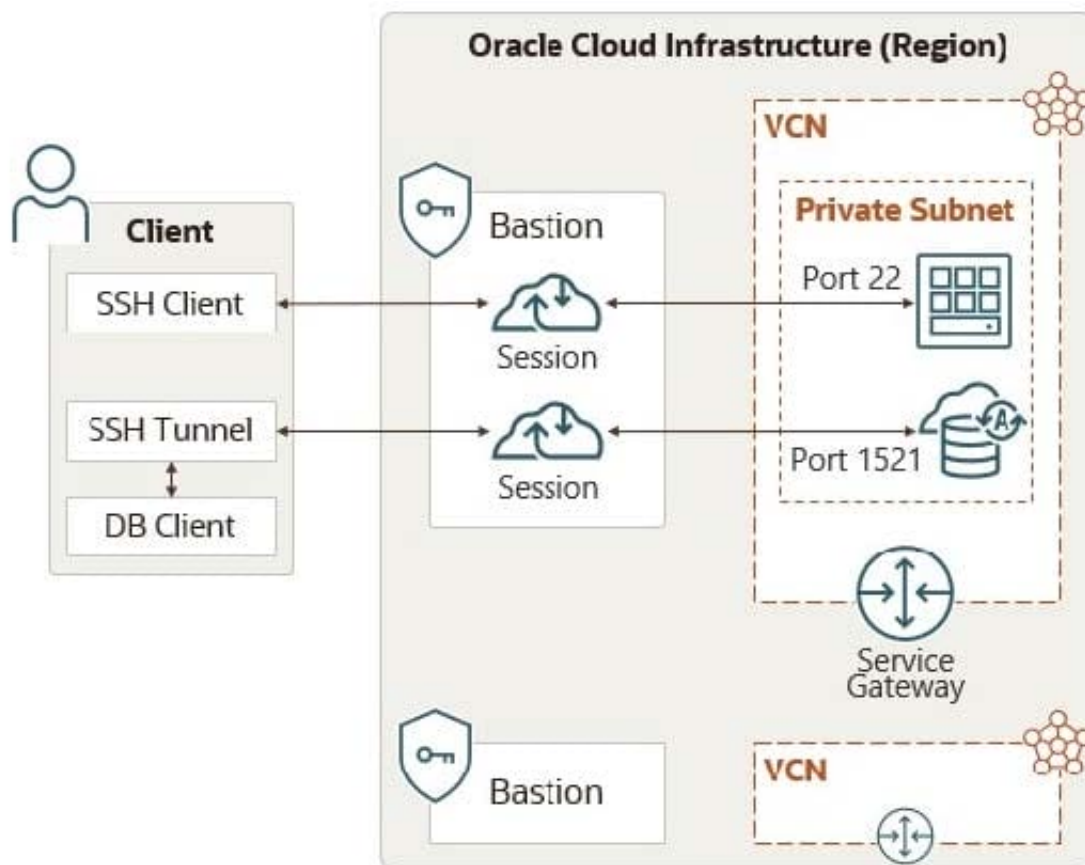

Which Oracle Cloud Service provides restricted access to target resources?

- A. Bastion
- B. Internet Gateway
- C. Load balancer
- D. SSL certificate

Correct Answer: A

Bastion

Oracle Cloud Infrastructure Bastion provides restricted and time-limited access to target resources that don't have public endpoints.
