**QUESTION 1**

How can you convert a fixed load balancer to a flexible load balancer?

- A. There is no way to convert the load balancer.
- B. Use Update Shape workflows.
- C. Delete the fixed load balancer and create a new one.
- D. Using the Edit Listener option.

Correct Answer: B

QUESTION 2

Which is NOT a compliance document?

- A. Certificate
- B. Penetration test report
- C. Attestation
- D. Bridge letter

Correct Answer: B

Types of Compliance Documents

When viewing compliance documents, you can filter on the following types:

Attestation. A Payment Card Industry (PCI) Data Security Standard (DSS) Attestation of Compliance document.

Audit. A general audit report.

Bridge Letter (BridgeLetter). A bridge letter. Bridge letters provide compliance information for the period of time between the end date of an SOC report and the date of the release of a new SOC report.

Certificate. A document indicating certification by a particular authority, with regard to certification requirements and examination results conforming to said requirements.

SOC3. A Service Organization Controls 3 audit report that provides information relating to a service organization's internal controls for security, availability, confidentiality, and privacy.

Other. A compliance document that doesn't fit into any of the preceding, more specific categories.

QUESTION 3

Which challenge is generally the first level of bot mitigation, but not sufficient with more advanced bot tools?

- A. CAPTCHA challenge
- B. JavaScript challenge
- C. Device fingerprint challenge
- D. Human interaction challenge

Correct Answer: B

QUESTION 4

How can you restrict access to OCI console from unknown IP addresses?

- A. Create tenancy's authentication policy and create WAF rules
- B. Create tenancy's authentication policy and add a network source
- C. Make OCI resources private instead of public
- D. Create PAR to restrict access the access

Correct Answer: B

You can use network sources to help secure your tenancy in the following ways:

- Specify the network source in IAM policy to restrict access to resources.
When specified in a policy, IAM validates that requests to access a resource originate from an allowed IP address.
For example, you can restrict access to Object Storage buckets in your tenancy to only users that are signed in to Oracle Cloud Infrastructure through your corporate network. Or, you can allow only resources belonging to specific subnets of a specific VCN to make requests over a [service gateway](#).
- Specify the network source in your tenancy's authentication settings to restrict sign in to the Console.
You can set up your tenancy's authentication policy to allow sign in to the Console from only those IP addresses specified in your network source. Users attempting to sign in from an IP address not on the allowed list in your network source will be denied access. For information on using a network source restriction in authentication policy, see [Managing Authentication Settings](#).

QUESTION 5

Which volume type contains the image used to boot a compute instance?

- A. Init 6 volume
- B. Boot volume
- C. Startup volume
- D. Block volume

Correct Answer: B

Boot Volumes When you launch a virtual machine (VM) or bare metal instance based on a platform image or custom image, a new boot volume for the instance is created in the same compartment. That boot volume is associated with that instance until you terminate the instance. When you terminate the instance, you can preserve the boot volume and its data
