**QUESTION 1**

The Oracle AutoML pipeline automates hyperparameter tuning by training the model with different parameters in parallel. You have created an instance of Oracle AutoML as `ora_cle_automl` and now you want an output with all the different trials performed by Oracle AutoML. Which of the following command gives you the results of all the trials?

- A. `Oracle.automl.visualize_algorithm_selection_trails()`
- B. `Oracle.automl.visualize_adaptive_sampling_trails()`
- C. `Oracle.automl.print_trials()`
- D. `Oracle.automl.visualize_tuning_trails()`

Correct Answer: C

QUESTION 2

You want to ensure that all stdout and stderr from your code are automatically collected and logged, without implementing additional logging in your code. How would you achieve this with Data Science Jobs?

- A. Data Science Jobs does not support automatic log collection and storing.
- B. On job creation, enable logging and select a log group. Then, select either log or the option to enable automatic log creation.
- C. You can implement custom logging in your code by using the Data Science Jobs logging.
- D. Make sure that your code is using the standard logging library and then store all the logs to Check Storage at the end of the job.

Correct Answer: C

QUESTION 3

You are a data scientist working for a manufacturing company, you have developed a forecasting model to predict the sales demand in the upcoming months. You created a model artifact that contained custom logic requiring third party libraries. When you deployed the model, it failed to run because you did not include all the third-party dependencies in the model artifact.?

- A. `Score.py`
- B. `Runtime.yaml`
- C. `Requirement.txt`
- D. `Model_artifact_validate.py`

Correct Answer: C

**QUESTION 4**

You are preparing a configuration object necessary to create a Data Flow application. Which THREE parameter values should you provide?

- A. The path to the archive.zip file.
- B. The local path to your pySpark script.
- C. The compartment of the Data Flow application.
- D. The bucket used to read/write the pySpark script in Object Storage.
- E. The display name of the application.

Correct Answer: BDE

QUESTION 5

As you are working in your notebook session, you find that your notebook session does not have enough compute CPU and memory for your workload. How would you scale up your notebook session without losing your work?

- A. Ensure your files and environments are written to the block volume storage under the /home/datascience directory, deactivate the notebook session, and activate the notebook larger compute shape selected.
- B. Down your files and data to your local machine, delete your notebook session, provision tebook session on a larger compute shape, and upload your files from your local the new notebook session.
- C. Deactivate your notebook session, provision a new notebook session on larger compute shape, and re-create all your file changes.
- D. Create a temporary bucket in Object Storage, write all your files and data to Object Storage, delete tur ctebook session, provision a new notebook session on a larger com-pute shape, and capy your flies and data from your temporary bucket onto your new notebook session.

Correct Answer: A
