**QUESTION 1**

Which two ports need to be opened on a network firewall to allow an outside client (on the other side of the firewall) to be able to access a MySQL instance inside the firewall?

- A. Port 13306/tcp [MySQL], when using TCP/IP via a command-line client
- B. Port 3306/tcp [MySQL], when tunneling is not used from within MySQL Workbench
- C. Port 18443/tcp [MySQL], when connecting from MySQL Workbench to a Windows MySQL server
- D. Port 22/tcp [SSH], when using TCP/IP over SSH

Correct Answer: BD

QUESTION 2

You have a MySQL Server instance (running with Port# 3306) monitored by the Service Manager in MySQL Enterprise Monitor. You cloned the MySQL Database instance and configured it to be a replicated MySQL instance as Slave using Port# 3316 on the same machine as the Master Server. The replication configuration is working correctly. The Master and Slave Servers are running.

You are trying to add the newly created MySQL Slave instance to the Monitor. The Service Manager in MySQL Enterprise Monitor notifies you that the new instance is successfully added; however, it is not added correctly at the newly added configuration points to the old Master monitored items. The Monitor shows only one monitored MySQL instance for Master and Slave.

Identify two reasons for this problem.

- A. The SLAVE and MASTER instances are started with the same configured value for the option - - monitor_server_uuid.
- B. The MASTER and SLAVE are grouped as one instance for monitoring.
- C. The mysql.inventory table on SLAVE is cloned with the same content as MASTER, which has the same server UUID.
- D. The mysql.instance table on SLAVE is cloned with the same content as MASTER, which has the same server UUID.
- E. All the MySQL instances (Master and Slave) have the same server_uuid in /auto.cnf.

Correct Answer: BD

QUESTION 3

You want to use Workbench to connect your local MySQL instance by using a local socket. Where would you find the location of the socket file?

- A. The socket file is located in the MySQL data directory.
- B. You can find the file by querying the GLOBAL VARIABLE SOCKET_LOCATION parameter.

- C. The file location is set by using the socket parameter located in the global or local option file.
- D. You always use port 3307 for connecting by using the local socket.
- E. You have to set up your session to be able to accept LOCAL SOCKET, and then connect via port 22.

Correct Answer: C

QUESTION 4

You are having performance issues with MySQL instances. Those servers are monitored with MySQL Enterprise Monitor (MEM). How would you proceed?

- A. Sort the "Exec" column and check for SQL queries with high QRTi values.
- B. Sort the "Exec" column and check for SQL queries with low QRTi values.
- C. Look for queries with low total latency times in the Latency section in the times series graph (Query Analyzer.)
- D. Look for queries with big prolonged spikes in row activity/access graph in the times series graph (Query Analyzer.)

Correct Answer: C

QUESTION 5

Which statement would create an index by using the first 10 characters of the name column in the customer table (assuming that name is a nonbinary string type?)

- A. CREATE SUB INDEX part_of_name ON (customer, name, 10);
- B. CREATE INDEX (10) ON (customer.name);
- C. CREATE INDEX part_of_name ON customer (name(10));
- D. CREATE PARTIAL INDEX part-of_name ON customer (name, 10);
- E. CREATE INDEX part_of_name ON customer.name LIMIT 10 CHAR;

Correct Answer: C
