QUESTION 1

Assume that MySQL Enterprise Monitor is configured to monitor MySQL 5.6 or a later instance. Which three features are available?

A. Deploying MySQL Agent on supported target operating system

B. Tracing import and export with mysqldump

C. Monitoring the availability of the MySQL instance

D. Creating E-Mail Alerts and SNMP Traps for MySQL Warnings

E. Starting and Stopping the MySQL Instance

F. Analyzing executed MySQL queries

Correct Answer: ABD

QUESTION 2

You want to change the default behavior of MySQL Enterprise Monitor (MEM). New instances detected by a MEM agent should automatically monitor discovered instances.

How can you change the Advisor Setting?

A. Go to the configuration section (Users) and create a new user according to the existing users of your new MySQL instances.

B. Go to the configuration section (Advisors) and edit the default settings of the MySQL Process Discovery according to the existing users of your new MySQL instances.

C. Go to the configuration section (Advisors) and create a new advisor rule for new MySQL instances based on the MySQL Advisor Wizard.

D. Go to the configuration section (MEM) and configure the default login credentials.

Correct Answer: B

Reference: https://docs.oracle.com/cd/E17952_01/mysql-monitor-3.0-relnotes-en/news-3-0-0.html

QUESTION 3

Which statement would create an index by using the first 10 characters of the name column in the customer table (assuming that name is a nonbinary string type?)

A. CREATE SUB INDEX part_of_name ON (customer, name, 10);

B. CREATE INDEX (10) ON (customer.name);

C. CREATE INDEX part_of_name ON customer (name(10));

D. CREATE PARTIAL INDEX part-of_name ON customer (name, 10);

E. CREATE INDEX part_of_name ON customer.name LIMIT 10 CHAR;

Correct Answer: C

Reference: https://dev.mysql.com/doc/refman/5.7/en/create-index.html

QUESTION 4

The following backup command is executed:

mysqlbackup -–defaults-file=config/mysqlbackup.cnf -–compress -–port=3306 -–host=127.0.0.1 -–user=mysqlbackup

Correct Answer: C

QUESTION 5

An existing MySQL Database environment has been doing backup and restore in a logical way by using the mysqldump and mysql client utilities. When the backup is started using mysqldump with single-transaction mode, the existing application has long wait time. When the restore is required, it takes more than three hours to restore.

What are two benefits of using mysqlbackup from MySQL Enterprise Backup in this situation?

A. MySQL Enterprise Backup does not back up system data so that it is much faster.

B. MySQL Enterprise Backup provides tape backup integration by default. It has the virtual tape option, which allows backup to tape device directly without extra third-party software integration.

C. mysqlbackup can back up tables with the InnoDB engine without blocking. The backup is hot with InnoDB. Together with Incremental Backup, mysqlbackup from MySQL Enterprise Backup shortens the backup windows.

D. mysqlbackup utilities dump the full database into a SQL file, which is imported into the mysql client in single-thread mode. mysqlbackup restores data from physical backups. Physical backup methods are faster than logical methods because they involve only file coping without conversion.

E. mysqlbackup from MySQL Enterprise Backup allows logical backup with concurrency built in to get faster backup speed and restoration speed.

Correct Answer: DE
