QUESTION 1

You are running multiple policy modeling projects and are using the collaboration and inclusions functionality to ensure consistent screen wording and reuse. You have a "corporate reference" project that contains some standard interview screens used in all Policy Modeling projects for your company.

Your company has had some policy changes and you are required to change the wording and layout on the common screens for all Policy Modeling projects. The changes are required immediately.

How can you achieve this using the minimum number of steps?

A. Update the corporate reference project in Policy Modeling, then upload the new version to the Hub. Deploy the new version of the corporate reference project and the changes will then be automatically propagated to all other Policy Modeling projects.

B. Update the corporate reference project and upload the new version to the Hub. Remove and then add the inclusions for all of the other projects, because inclusions will not merge screens.

C. Copy the screens from the Corporate project into all of the other Policy Modeling projects individually, and then click the Add button on the Inclusions tab for each project.

D. Update the corporate reference project and upload the new version to the Hub. Update all of the other projects individually by clicking the Update button on the Inclusions tab.

E. Update the corporate reference project and upload the new version to the Hub. Update all of the other projects individually by clicking the Reset button on the Inclusions tab.

Correct Answer: E

QUESTION 2

The source material for your policy model says:

To be eligible for the program, there must be at least one child in the family under 18 years of age. The payment amount for the family is based on the total income of all family members. If a family member has multiple jobs, include income

from all jobs.

Which two steps should you perform?

A. Create two entities: the family member, the family member\\'s job.

B. Create an interred entity for "the job" to allow for family members with multiple jobs.

C. Create three entities: the family member, the family member\\'s age, the family member\\'s job.

D. Create three attributes (the first job, the second job, the third job) to allow for family members with multiple jobs.

E. Create two entities: the family member, the family member\\'s age.

F. Use an entity function to calculate a family member\\'s total income from all their jobs.

Correct Answer: DE

QUESTION 3

You wrote this rule:

the scarf looks lovely if

all
    the scarf contains blue and
    the scarf contains green

or
all
    the scarf contains blue and
    the scarf does not contain green and
    the scarf contains red

or
all
    the scarf contains green and
    the scarf does not contain blue and
    the scarf contains red

or
all
    the scarf is red

How many attributes does it contain?

A. Three

B. Ten

C. Two

D. Six E. Seven

F. Five

G. Nine

H. Eight

I. Four

Correct Answer: G

QUESTION 4

Identify four features that have been used to enhance this interview screen.

A. Substitution

B. Containers

C. Configured styles

D. HTML

E.

F. Image control

G. CAPTCHA

Correct Answer: ABCE

QUESTION 5

A customer has requested an interview that will create an incident in Service Cloud along with a number of tasks (linked to the incident).

From a data mapping perspective at the entity level, how can this be achieved with the minimum number of steps?

A. Do not map the global entity. Create entities for both the task and incident objects and map these to the corresponding objects in Service Cloud.

B. Create a relationship between Tasks and Incidents in Service Cloud, map the global entity to the Task object and create a child entity for the Incident.

C. Map the global entity to the Task object and create an entity for the Incident object. Map the child entity to the Incident object in Service Cloud.

D. Map the global entity to the Incident object and create an entity for Task object. Map the child entity to the Task object in Service Cloud.

E. Map the global entity to both the Task and Incident objects, because primary objects can be mapped to directly.

Correct Answer: C
