**QUESTION 1**

You were working with the Session Border Controller in configuration mode and you forgot to close your session. Your colleague who connected after you left says that he cannot enter into configuration mode.

Why is your colleague not able to configure the Session Border Controller?

- A. The Session Border Controller does not allow more than one configuration session within 24 hours.
- B. The Session Border Controller does not support Telnet/SSH timeouts.
- C. The Session Border Controller supports only one simultaneous configuration session, and the Telnet/SSH timeouts are set to 0.
- D. The Session Border Controller supports only 10 simultaneous configuration sessions.
- E. The Session Border Controller supports only five simultaneous Telnet/SSH sessions.

Correct Answer: C

QUESTION 2

To return the Session Border Controller configuration to a known, factory default state, you must_____.

- A. press the reset button on the front panel
- B. issue the delete-config command
- C. issue the set-system-state offline command
- D. issue the set-system-state offline
- E. issue the delete-config and reboot commands

Correct Answer: E

QUESTION 3

What is the drawback of configuring Policy-Based Realm Bridging (PBRB) without the assistance of Header Manipulation Rules (HMRs)?

- A. Topology hiding is incomplete.
- B. The configuration requires a home realm to be defined, which can make privacy harder to achieve.
- C. The configuration requires you to enable SIP-NAT bridging, which is complex.
- D. The architecture is simple, and really designed for lab environments.
- E. The performance is poor relative to other models.

Correct Answer: C

QUESTION 4

Which configuration step is correct for a phy-interface configuration element used for signaling and/or media?

- A. A phy-interface element must be configured for each interface used for High Availability (HA) heartbeats, but not for signaling and/or media.
- B. After configuring a phy-interface configuration element for signaling and/or media, a reboot of the Session Border Controller is required.
- C. A phy-interface configuration element must be configured for each interface used.
- D. A unique phy-interface configuration element is created for all signaling/media interfaces.
- E. A phy-interface configuration element for signaling and/or media has the operation-type parameter set to control.

Correct Answer: B

QUESTION 5

You are configuring the boot parameters in the Session Border Controller.

Which three statements are true about the boot parameters? (Choose three.)

- A. A reboot is always required to apply any change to the boot parameters.
- B. The target name is used for domain name resolution.
- C. The system clock is a boot parameter.
- D. The boot parameters are stored in Non-Volatile Random Access Memory (NVRAM).
- E. The boot parameters are not affected by the activate-config command.

Correct Answer: ACD
