### QUESTION 1

Identify three correct behaviors of `anamx:panelSplitter`.

- A. splits the page into two areas: top and bottom
- B. automatically collapses the navigator facet when in portrait mode
- C. shows the navigator facet automatically in landscape mode
- D. can contain only `amx:listView` in the navigator facet
- E. can include `amx:tableLayout` in the `amx:panelItem`

Correct Answer: BCE

---

### QUESTION 2

Identify three features of Oracle Mobile Security Suite.

- A. It creates a separate container for corporate applications on a mobile device.
- B. It modifies service endpoints to allow for changing authentication protocols.
- C. It wipes data from a lost or stolen device.
- D. It allows single sign-on among different applications.
- E. It integrates heterogeneous services across a network.

Correct Answer: BCD

---

### QUESTION 3

Identify two characteristics of a responsive mobile application design.

- A. adjusts the back-end access to services based on the protocol being used
- B. adjusts the mobile UI based on the device orientation
- C. responds to user gestures such as tap and hold or swipe
- D. adjusts the mobile UI based on screen size
- E. immediately responds to changes the user makes to a field value in the UI layer.

Correct Answer: CE

---

**QUESTION 4**

You are asked to build an adaptive design into an MAF application. The requirement is to show a multipage wizard for an MAF application functionality when the application runs on a smartphone and a single page layout for the same functionality when the application runs on a tablet.

Which two options allow you to implement this use case?

- A. A Feature can have multiple contents (AMX pages, AMX Task Flow, and so on). A content constraint can be defined on the first content to hide when the application runs on a smartphone and to show when it runs on a tablet. This way, the first content configured for a Feature holds the single page layout, whereas the second (with no constraints defined) has the multipage wizard function.
- B. A Feature LifecycleListener class can be created and configured to load AMX content upon application start. In this case, Java, using the AdfmfContainerUtilities framework helper class, determines the type of device to be smartphone tablet and switches the content.
- C. Two MAF Features can be created, one for the single page view and the other for the multipage wizard. Constraints defined on the feature configuration conditionally switch between the two options.
- D. Selecting the Enable Adaptive Design check box in the maf-application.xml file visual editor allows you to configure constraints on the application level that, upon application start, tell the framework which MAF Features to load when the application is started on a smartphone and which Features to load when the application is started on a tablet.

Correct Answer: BD

---

**QUESTION 5**

How do the AMX components react at run time?

- A. They render all the UI using native UI components for each platform.
- B. They render the user interface using mostly HTML5 and JavaScript code rendered in the WebView.
- C. They use Java UI components (JavaFX) to render the interface.
- D. They use ADF Faces components to render the UI on the mobile device.

Correct Answer: B
