QUESTION 1

Which two privilege delegation types are supported by Oracle Enterprise Manager?

- A. Sudo
- B. DBrun
- C. Powerbroker
- D. Privilege Manager
- E. Group Policy Manager
- F. Persona_create

Correct Answer: AC

If you do not have access to either Oracle account or root account, then you can use SUDO or PowerBroker access to switch users to perform the tasks, this is called Privilege Delegation. Privilege Delegation is a framework that allows you to use either SUDO or PowerBroker to perform an activity with the privileges of another user (locked accounts).

QUESTION 2

Identify three unique capabilities of the Oracle Enterprise manager Application Management Pack for Fusion Applications.

- A. Captures technical configuration and topology information that is specific to Oracle Fusion Applications
- B. Organizes and displays data by the Oracle Fusion Applications product
- C. Captures functional usage heuristics and histograms related to Oracle Fusion Applications
- D. Executes testing scripts for Oracle Applications
- E. Organizes and displays data by family of Oracle Fusion Applications

Correct Answer: BCE

*

Fusions Apps user session diagnostics and full session replay

*

Fusion Apps user flow tracking, including transaction abandonment analysis

*

Customizable dashboards per application, user group segmented

*

Data warehouse integration, OLAP-based reporting

*

KPI to data store correlation analyses

*

Integrated problem diagnostics and impact analyses

*

Capture true user sessions as a source for QA testing via Oracle Application Testing Suite and/or

QUESTION 3

What order of steps would you use to display a virtual assembly with Oracle Enterprise manager?

A. Create an assembly with Oracle Virtual Assembly Builder Studio; upload the assembly to the software library; deploy, and then manage with Oracle Enterprise manager.

B. Create an assembly with Oracle Virtual Machine Builder Studio; save the software library; deploy, and then manage with Oracle Enterprise Manager.

C. Create an assembly with Oracle Virtual Machine Builder Studio; upload the assembly to the repository; deploy, and then manage with Oracle Enterprise manager.

D. Create an assembly with Oracle Application Express; upload the assembly to the repository; deploy, and then manage with Oracle Enterprise manager.

Correct Answer: A

Note:

*

Step 1: Oracle Virtual Assembly Builder

Oracle Virtual Assembly Builder makes it possible for administrators to quickly configure and provision entire multi-tier application topologies onto virtualized and cloud environments. It provides a framework for capturing the configuration of

existing software components and packaging them as self-contained building blocks known as appliances. These appliances can then be easily connected to form application blueprints known as assemblies. This innovative approach makes

it practical for complex enterprise applications to easily be customized and provisioned in their entirety with minimal to no manual intervention onto virtualized and cloud environments.

*

Step 2 Software Library

The Software Library Administration console allows you to configure and administer Software Library. To start using the Software Library, you must add at least one upload file storage location (OMS Shared location, or OMS Agent location)

on the host where the OMS is running. A storage location in Software Library represents a repository of files, these files are either uploaded by Software Library, or generated and saved by some user-owned process.

QUESTION 4

Which three steps are true in Enterprise manager Cloud Control's Cloud infrastructure administration setup?

- A. Provision Bare metal, Hypervisor, or the underlying infrastructure software for Database as a Service and Platform as a Service.
- B. Configure assembly deployments.
- C. Request assembly deployments.
- D. Define zones based on functional and operational boundaries.
- E. Clone WebLogic Domains.

Correct Answer: ACD

New Administrator Roles in Clouds (IaaS) for Cloud Administrator:

*

(A) Provision bare metal hypervisor

*

Configure storage arrays and network (VLAN)

*

Create server pools

*

(D) Define zones based on functional and operational boundaries

*

Configure software library

*

(C) request database deployment.

Note:

Database-as-a-service Deployment include

QUESTION 5

What four targets from an Oracle Exalogic Cloud System can be managed by Oracle Enterprise Manager?

- A. Application deployments
- B. Oracle WebLogic domains
- C. Oracle Coherence domains
- D. Oracle Database firewall
- E. Hosts
- F. Oracle WebCenter

Correct Answer: ABCE

/ (A) Use the Application Deployments page in the Exalogic Elastic Cloud target area to view details about the applications hosted on the hosts running on the Exalogic Elastic Cloud target. / The following targets can comprise the Oracle Exalogic Elastic Cloud:

*

Infiniband Network - An Infiniband Network has IB Switches as members. This is a one to many association.

*

SOA Infrastructure

*

(B) WebLogic Domains *(C) Coherence Clusters

*

OTD

*

Hardware Targets (such as PDU, CISCO Switch, ZFS, and ILOMs)

*

(E) Hosts Reference: Oracle Enterprise Manager Cloud Control Getting Started with Oracle Fusion Middleware Management, Monitoring Oracle Exalogic Elastic Cloud
