QUESTION 1

What could cause an AddTargetUser operation to fall with a 401 or a 403 error?

- A. Virtual Assembly Builder Deployer application is down.
- B. The user whose credentials were used to connect to Virtual Assembly Deployer has not been granted the Cloud Admin role.
- C. A connection between Virtual Assembly Builder Deployer and oracle VM Manager resource pool has not been configured.
- D. The Oracle VM Manager Admin user, whose credentials were used in the createTarget operation, has not been granted the Application Admin role.

Correct Answer: B

QUESTION 2

Which two conditions ensure enabling SSL Mutual Authentication (two-way SSL?) (Choose two.)

- A. There is confidential communication between client and server.
- B. The server trusts the client and the client trusts the server.
- C. The client is authorized to accessindex.html.
- D. Clients can enter the DMZ.

Correct Answer: BD

QUESTION 3

After going through a sizing exercise, you determine that your application will need 100 storage-enabled JVMs with 4 GB heaps. You have 10 physical machines with 16 cores and 32 GB of RAM.

Which performance-tuning best practice would be violated by deploying your application on these machines?

- A. Heap sizes should not be larger than 512 MB.
- B. OS socket buffers should be at least 2 MB.
- C. Avoid OS memory swapping/paging by not exhausting physical RAM.
- D. Do not exceed one JVM per core.

Correct Answer: B

QUESTION 4

The performance of your query is very slow.

Which two actions would you take to diagnose potential bottlenecks? (Choose two.)

- A. Check that indexes are registered against the fields being queried.
- B. Monitor the task execution time.
- C. Use the QueryRecorder to see the query Trace and Explain plan.
- D. Check that indexes are cached against the fields being queried.
- E. Monitor the task performance time.

Correct Answer: BD

QUESTION 5

A Coherence node dies and is removed from a cluster.

What two actions occur if that node was part of a distributed cache where backup_count = 1? (Choose two.)

- A. Access is blocked to all operations while the cluster is rebalanced.
- B. Data is re-partitioned so that all data is accessible again.
- C. Partitions are moved so that the data is balanced among remaining nodes.
- D. Backup partitions are promoted to be primary, and new backups are created.

Correct Answer: AC
