QUESTION 1

Identify two ways in which Nucleus components can be configured.

A. using the JMX console of the application server

B. using the BCC

C. manually editing the properties files

D. using the Dynamo Administration UI at /dyn/admin

E. using the ATG Component Configuration Helper Utility

F. using an XML editor

Correct Answer: CE

The application developer creates the slot as a Nucleus component. He or she can do this in three ways:

by writing a .properties file; by using the Component Editor in the ATG Control Center; or by using the Scenarios > Slots window in the ATG Control Center.

QUESTION 2

Which three methods are recommended for removing a profile marker from the profile?

A. the "deleteMarkers" method on the atg.markers.userprofiling.ProfileMarkerManager class

B. Use a scenario with tin- "Remove markers from profile" action.

C. Use the ProfileMarkerDmplot.

D. Use the RemoveAllMarkersFromProfileDroplet.

E. Profile markers are automatically deleted at the end of the session.

Correct Answer: B

In order to remove specific markers from an active user profile, create a scenario that uses the Remove markers from profile action and specify the key used by the markers you want to remove. You can provide additional information such as a value or data value: markers that have the values for the properties you provide will be removed from the active user profile. Refernence: ATG Personalization Programming Guide , Specific Profile Markers From a Profile

Note: Removing Profile Markers It\\'s a good idea to set up a mechanism that removes profile markers when they are no longer relevant to your application. You may use markers to monitor some user behavior, but once you\\'ve gathered the data you need, flush markers from the profiles in one of the ways described here.

In general, you remove markers from a given profile either by removing specific markers or all of them at once.

QUESTION 3

If you want to update the computedCatalogs and parentCatalog properties of a product, which service should you use?

A. ProductUpdateService

B. CatalogGeneratorService

C. AncestorGeneratorService

D. ComputedCatalogService

Correct Answer: C

The AncestorGeneratorService component generates ancestor categories for the product and category item types, and stores the names of these ancestor categories in the ancestorCategories property of each product and category.

The AncestorGeneratorService updates the following property values for each of the catalog item types. This service must be executed after making catalog updates in order for catalog navigation and search to work correctly.

QUESTION 4

You\'ve made the following category assignments to your catalogs.

Which categories will be displayed if a call is made on allRootCategories on catalog B?

Catalog A:

rootCategories = category1, category2

Catalog B:

rootCategories = category3, category4

rootSubCatalogs = CatalogA

A. category1, category2, category3, catcgory4

B. category3, category4 only

C. category3, category4 are included, category1 and category2 may be included based on configuration of catalog B.

D. category3, category4 are included, category1 and category2 may be included based on configuration of Catalog A.

Correct Answer: A

allRootCategories lists of all the root categories in the catalog, including the allRootCategories in the rootSubCatalogs. This is used for display purposes.

Note: Displaying Root Categories

Typically, a catalog home page displays a list of root categories. Unlike other categories, root categories cannot be found through the childCategories property of other categories. Root categories are those that appear in the allRootCategories property of the user\'s catalog.

QUESTION 5

What must you configure for ATG to charge the payment on the first shipment?

A. Configure settlementStep in PaymentManager.

B. This is handled OOTB. ATG always settles on last shipment in accordance with PCI compliance

C. Configure SettleOnFirstShipment on OrderFulfiller.

D. Nothing. ATG assumes settlement was done when order was placed.

E. Write custom code in HardgoodFulfiller

Correct Answer: C

The order is settled (paid for) according to the value of the settleOnFirstShipment property. If this property is true, the order is settled after the first shipping group in the order ships. If this property is false, the order is settled after the last shipping group in the order ships.

Note: The OrderFulfiller class handles the start of the fulfillment process and is responsible for the routing of various requests made to the fulfillment subsystem. In a sense, the OrderFulfiller is the hub of communication relating to fulfillment. The order to be fulfilled is received through a SubmitOrder message and is handled by the handleSubmitOrder method . The OrderFulfiller is responsible for farming out FulfillOrderFragment messages to the various fulfillers interested in pieces of the order.

Different fulfillers such as HardgoodFulfiller receive the FulfillOrderFragment message and begin processing of the shipping groups specified within.
