**QUESTION 3**

What four steps are required to configure an FDM application with an FM application? (Choose four.)

A. Dimension names between FDM and FM are set in the FDM workbench or the Web client under metadata/dimensions.

B. Define the FM application name in Integration Settings in FDM.

C. Define the FM server name in machine profiles\\' properties.

D. Map locations to an entity using the FDM workbench under Integration Settings.

Integration Settings is an option in FDM web, and the only configuration in FDM workbench is the "default load balance server". The only configuration requirement for entering the FDM web server in the FDM workbench is in the HFM adapter configuration for FDM (not under Integration Setting) ?and even that is an optional setting which is only required when "Intersection Validation Report" is enabled. see fm11x_g6_a-target_adapter_readme.pdf in the Hyperion EPM documentation library.
