**QUESTION 1**

You are creating a JSP page to display a collection of data. This data can be displayed in several different ways so the architect on your project decided to create a generic servlet that generates a comma-delimited string so that various pages can render the data in different ways. This servlet takes on request parameter: objectID. Assume that this servlet is mapped to the URL pattern: /WEB-INF/data.

In the JSP you are creating, you need to split this string into its elements separated by commas and generate an HTML

list from the data.

Which JSTL code snippet will accomplish this goal?

- A.
 - `${item}`
- B.
 - `$(item)`
- C.
 - `$ {item}`
- D.
 - `$ {item}`

Correct Answer: D

QUESTION 2

You need to retrieve the username cookie from an HTTP request. If this cookie does NOT exist, then the c variable will be null. Which code snippet must be used to retrieve this cookie object?

- A. 10. `Cookie c = request.getCookie("username");`
- B. 10. `Cookie c = null;`11. `for ( Iterator i = request.getCookies();`12. `i.hasNext(); )` {13. `Cookie o = (Cookie)`
- C. `next();`14. `if ( o.getName().equals("username") )` {15. `c = o;`16. `break;`17. `}`18. `}`
- D. 10. `Cookie c = null;`11. `for ( Enumeration e = request.getCookies();`12. `e.hasMoreElements(); )` {13. `Cookie o = (Cookie) e.nextElement();`14. `if ( o.getName().equals("username") )` {15. `c = o;`16. `break;`17. `}`18. `}`
- E. 10. `Cookie c = null;`11. `Cookie[] cookies = request.getCookies();`12. `for ( int i = 0; i`

Correct Answer: D

**QUESTION 3**

Which JSTL code snippet can be used to import content from another web resource?

- A.
- B.
- C.
- D.

E. Importing cannot be done in JSTL. A standard action must be used instead.

Correct Answer: A

QUESTION 4

Your web application uses a lot of Java enumerated types in the domain model of the application. Built into each enum type is a method, `getDisplay()`, which returns a localized, user-oriented string. There are many uses for presenting enums within the web application, so your manager has asked you to create a custom tag that iterates over the set of enum values and processes the body of the tag once for each value; setting the value into a page-scoped attribute called, `enumValue`. Here is an example of how this tag is used:

10.

11.

12.

`${enumValue.display}##!NwL!#`

13.

14.

You have decided to use the Simple tag model to create this tag handler.

Which tag handler method will accomplish this goal?

A. `public void doTag() throws JspException {try {for ( Enum value : getEnumValues() ) {pageContext.setAttribute("enumValue", value);getJspBody().invoke(getOut());}} (Exception e) { throw new JspException(e); }}`

B. `public void doTag() throws JspException {try {for ( Enum value : getEnumValues() ) {getJspContext().setAttribute("enumValue", value);getJspBody().invoke(null);}} (Exception e) { throw new`

JspException(e); }}

C. public void doTag() throw JspException {try {for (Enum value : getEnumValues()) {getJspContext().setAttribute("enumValue", value);getJspBody().invoke(getJspContext().getWriter());}} (Exception e) { throw new JspException (e); }}

D. public void doTag() throw JspException {try {for (Enum value : getEnumValues()) {pageContext.setAttribute("enumValue", value);getJspBody().invoke(getJspContext().getWriter());}} (Exception e) { throw new JspException(e); }}

Correct Answer: B

QUESTION 5

Given tutorial.jsp:

2.

EL Tutorial

3.

Example 1

4.

5.

Dear \${my:nickname(user)}

6.

Which, when added to the web application deployment descriptor, ensures that line 5 is included verbatim in the JSP output?

A. *.jsptrue

B. *.jsptrue

C. *.jsp

D. *.jsptrue

E. *.jsptrue

Correct Answer: D
