**QUESTION 1**

Given this output from dumpadm:

```
# dumpadm Dump content: kernel pages Dump device: /dev/dsk/c0t0d0s1 (swap) Savecore directory: /var/crash/rabbit
Savecore enabled: yes and these directory contents: # ls -al /var/crash/rabbit total 4 drwx----- 2 root root 512 Jan 27
10:28 . drwxr-xr-x 3 root root 512 Jan 27 10:28 ..
```

Which three files exist in the directory after rebooting following a panic? (Choose three.)

- A. unix.0
- B. unix.X
- C. bounds
- D. vmcore.0
- E. bounds.X
- F. vmcore.X

Correct Answer: BEF

---

**QUESTION 2**

When will Solaris Volume Manager software volumes continue to function normally in the event of the corruption of one copy of its state database?

- A. when the master copy of the state database is NOT corrupted
- B. when the copy of the state database on the boot disk is available
- C. when more than half of the copies of the state database are available
- D. when NOT more than a single copy of the state database is corrupted

Correct Answer: C

---

**QUESTION 3**

You must set up three users to administer the artwork department. These users will be launching several applications with the EUID of department administrator. Using the RBAC mechanism, what is the sequence of events to execute this process?

- A. create entries for the applications in the RBAC profile database, associate a role with the new profile entry, and give the three users access to the role
- B. update the \$HOME/.rbac\_privs file for each user to point to applications in question and amend the user attribute database to use the admin EUID with these applications

C. create entries for the applications in the RBAC policy attributes database, associate a profile with the new policy entry, associate a role with this profile, and give the three users access to the role

D. create entries for the applications in the RBAC execution attributes database, associate a profile with the new execution entry, associate a role with this profile, and give the three users access to the role

Correct Answer: D

---

#### QUESTION 4

You have three applications from three different vendors, but only one system to run them on. Each application will require different OS patches to be installed. The problem you will encounter, if you load all of these applications on the same server, is that the vendor will not support the application if it runs on anything but the recommended environment. Which answer provides a solution?

A. Run each application in a separate non-global zone. Patch each zone separately.

B. Run each application in a zone. Install one application in the global-zone and patch it with the most current patch versions allowed. Do not patch the non-global zones.

C. Run each application in a separate non-global zone. Patch the non-global zones with the most current patch versions.

D. Zones will not work in this scenario- use domains.

Correct Answer: A

---

#### QUESTION 5

systemA has a file system that is being shared as follows:

```
-- /data/dbase rw
```

systemB mounts that file system as follows:

```
/data on systemA:/data/dbase\ remote/read/write/setuid/devices/xa11r/dev=4c00002
```

On systemB, whenever root tries to create or copy a file to the /data directory, root receives the following error: cannot create Which answer describes a solution to this problem?

A. On systemA, give root write privileges to the /data/dbase directory.

B. n systemA, Share /data/dbase as follows: share --F nfs --o root=systemB /data/dbase

C. n systemA, Share /data/dbase as follows: share --F nfs --o rw=systemB /data/dbase

D. n systemB, mount the remote file system as follows: mount --F nfs --o rw systemA:/data/dbase /data

Correct Answer: B
