QUESTION 1

A servlet class is injected with a JDBC data source. After injection has occurred, the servlet needs to create a cache out of some of the data in the database, so as to improve responsiveness. Which two methods can host the cache creation code? (Choose two)

- A. Servlet.init()
- B. Servlet.destroy()
- C. A method annotated with @Init
- D. A method annotated with @PostConstruct
- E. A method annotated with @PreDestroy
- F. A method annotated with @Resource

Correct Answer: AD

A: Because the Servlet init() method is invoked when the servlet instance is loaded, it is the perfect location to carry out expensive operations that need only be performed during initialization. By definition, the init() method is thread-safe. The

results of operations in the HttpServlet.init() method can be cached safely in servlet instance variables, which become read-only in the servlet service method.

D: Example:

```
@PostConstruct
```

```
private void init() {
```

```
cached = (Cached) ctx.lookup(EJB_PATH + Cached.class.getSimpleName());
```

QUESTION 2

Which Java expression can be used to check whether the web container is currently configured to track sessions via URL rewriting?

- A. servletContext.getSessionCookiesConfig().isHttpOnly()
- B. servletContext.getSessionCookiesConfig().isSecure()
- C. servletContext.getDefaultSessionTrackingModes().contains(SessionTrackingMode.URL)
- D. servletContext.getEffectiveSessionTrackingModes().contains (SessionTrackingMode.URL)

Correct Answer: D

Code example:

```
String sessionID = null;
```

```
if (request.getServletContext().getEffectiveSessionTrackingModes().contains (SessionTrackingMode.URL)) {  
// Get the session ID if there was one  
sessionID = request.getPathParameter(  
SessionConfig.getSessionUriParamName(  
request.getContext()));  
if (sessionID != null) {  
request.setRequestedSessionId(sessionID);  
request.setRequestedSessionURL(true);  
}  
}
```

C: getDefaultSessionTrackingModes

java.util.Set getDefaultSessionTrackingModes() Gets the session tracking modes that are supported by default for this ServletContext.

QUESTION 3

Given an HttpServletRequest request and an HttpServletResponse response:

41.

```
HttpSession session = null;
```

42.

```
// insert code here
```

43.

```
if (session == null) {
```

44.

```
// do something if session does not exist
```

45.

```
} else {
```

46.

```
// do something if session exists
```

47.

```
}
```

To implement the design intent, which statement must be inserted at line 42?

- A. `session = response.getSession ();`
- B. `session = request.getSession ();`
- C. `session = request.getSession (true);`
- D. `session = request.getSession (false);`
- E. `session = request.getSession ("jsessionId");`

Correct Answer: D

QUESTION 4

Given a jar file packaged with three web fragments with names X, Y and Z respectively.

Which of the following deployment descriptor, web.xml, snippets correspond to the web fragment processing orders of X, Y, Z?

- (i)
X Y Z
 - (ii)
X Y
 - (iii) Y Z
 - (iv)
X Z
 - (v)
X Y
- A.
(i) only
- B.
(i) and (ii)
- C.
(i) and (iv)
- D.

(i), (iii), (iv) and (v)

Correct Answer: C

QUESTION 5

A cookie may be set to be an HttpOnly cookie. Setting a cookie to be HttpOnly results in (Choose two)

- A. Client to not expose the cookie to client side scripting code
- B. Does not work with https protocol
- C. prevent certain types of cross-site scripting attacks
- D. There is no such thing as an HttpOnly cookie

Correct Answer: AC
