**QUESTION 1**

What is used to run containerized applications in a Kubernetes cluster created using Oracle Cloud Infrastructure Container Engine for Kubernetes (OKE)?

- A. Master nodes within the Kubernetes cluster are used to run containerized applications.
- B. Kubelets within the Kubernetes cluster are used to run containerized applications.
- C. Kubernetes controllers within the Kubernetes cluster are where containerized applications run.
- D. Worker nodes within the Kubernetes cluster are used to run containerized applications.

Correct Answer: D

QUESTION 2

Which source provides WebLogic Server log information for applications deployed on a Java Cloud Service instance?

- A. The log file indicated on the Diagnostics page of the WebLogic Server administration console
- B. The system logs of the compute node that hosts the WebLogic administration server
- C. The Activity page of the service web console
- D. The WebLogic Server logs extracted using the Java Cloud Service REST API

Correct Answer: D

QUESTION 3

What are the three processes that are part of the Kubernetes Master in a Kubernetes cluster?

- A. The process are: kubelet, kube-proxy and kube-controller.
- B. The processes are: kube-apiserver, kube-controller-manager and kube-scheduler.
- C. The process are: kubectll, kubelet and kube-proxy.
- D. The process are: oke-kube-apiserver, oke-kube-controller-manager and oke-kube-scheduler.

Correct Answer: B

Reference: <https://kubernetes.io/docs/concepts/overview/components/>

QUESTION 4

Which two statements about backups in Oracle Java Cloud Service are false? (Choose two.)

- A. Java Cloud Service can disable backups automatically after a failure.
- B. Java Cloud Service backs up the WebLogic Server software installation.
- C. You cannot perform a scaling operation while a backup operation is in progress.
- D. On-demand backups are always incremental backups.
- E. Java Cloud Service backs up the WebLogic Server domain configuration.
- F. You can customize the schedule at which Java Cloud Service automatically takes backups.

Correct Answer: CD

QUESTION 5

When creating Java Cloud Service, on the Service Details page of the Wizard, you have to provide details about the database(s) to use for the Oracle Java Cloud Service instance. What happens if you specify "Add Application Schema" parameter?

- A. It creates an additional data source in your Oracle WebLogic Server domain to connect to this database.
- B. It adds another schema in same database used to host the Oracle schemas required for Oracle Java Cloud Service.
- C. It creates a second Oracle Database Cloud Service instance for your application schema.
- D. It creates a second PDB in same database used to host the Oracle schemas required for Oracle Java Cloud Service.

Correct Answer: A

Explanation: Add Application Schema (2nd Para)
