---

### QUESTION 2

Which two optional related to Planning and Budgeting Cloud (PBCS) security are true? (Choose two.)

- A. Users in the User role can create and edit Business Rules
- B. Users can write to members in a dimension that are calculated
- C. All users can install Smart View
- D. Users can have different access to Data Forms between the SUI and Smart View

Correct Answer: AD

---

### QUESTION 3

Which three are traits of the Sandboxes feature?

- A. Sandboxes can be enabled at the application level only
- B. Sandboxes can be enabled for BSO and ASO cubes
- C. Planners can have multiple sandboxes
- D. Planners can immediately see the effect of their changes
- E. When working in a sandbox, planners can add members

Correct Answer: CDE

Planners can have multiple sandboxes and switch among them.

To make versions available to sandboxes, administrators create Version members and then select the member property Enable Sandboxes.

**QUESTION 4**

Which three are general methods for directly pushing data between cubes? (Choose three.)

- A. Copy Data
- B. Smart Push
- C. Data Management
- D. Import Data
- E. Data Maps

Correct Answer: ABE

A: You can copy plans from one dimensional intersection to another, including relational data and supporting detail.

B: About Smart Push

For more meaningful and complete reporting, planners can move comments, attachments, and supporting detail to multiple cubes. Users can then do more analysis on the planning data coming from the different cubes.

E: To move data to a reporting cube:

Create the reporting cube.

Click Application, and then click Data Maps.

To the right of a data map, click Action icon, and then select Push Data.

**QUESTION 5**

Which two are use cases for Smart Push? (Choose two.)

- A. Allow the application to determine when it is best to synchronize data
- B. Allow users to update data in another cube on-demand
- C. Allow users to update data in a reporting cube upon saving data in the planning web form
- D. Allow users to schedule when to synchronize data between cubes

Correct Answer: BC

Without Smart Push, the data from your cubes would be moved to the reporting cube through scheduled jobs. Smart Push allows the data to be moved to the reporting cube almost immediately.

You define whether Smart Push will be automatic or manual.
