QUESTION 1

Which two elements are needed to create a secure SSID on an autonomous AP? (Choose two.)

- A. SSID name
- B. WLC MAC address
- C. PSK
- D. LDAP server
- E. WLC IP

Correct Answer: AC

QUESTION 2

Which third-party tool is appropriate to assist in troubleshooting?

- A. Wireshark
- B. DART
- C. VLAN
- D. dot1q trunk

Correct Answer: A

QUESTION 3

A customer wants to use Cisco Prime Infrastructure to manage its current wireless infrastructure. The customer has 4 wireless controllers and 97 wireless access points. What is the minimum amount of licensing that is required on Cisco Prime Infrastructure to support the desired wireless infrastructure?

- A. 4 Lifecycle licenses and 125 Base licenses
- B. 100 Lifecycle licenses and 1 Base license
- C. 100 Lifecycle licenses and 4 Base licenses
- D. 125 Lifecycle licenses and 1 Base license

Correct Answer: B

QUESTION 4

What security benefit is enabled by using Management Frame Protection?

- A. Provides encryption of administrator sessions between a wireless client and a wireless LAN controller.
- B. Protects the network infrastructure from denial-of-service attacks that attempt to flood the network with associations and probes.
- C. Prevents the formation of client ad hoc networks within the RF coverage domain.
- D. Detects network reconnaissance probes, like those used by tools like NetStumbler, that attempt to discover the wireless network topology.

Correct Answer: B

QUESTION 5

Which description best describes upfade in a multipath environment?

- A. In this situation, multiple signal paths are not sent at exactly the same time. The receiver receives a positive crest on the primary signal and a negative crest on the secondary signal.
- B. In this situation, the multiple signal paths are distorted and difficult to understand.
- C. In this situation, the multiple signal paths are weaker than they should be because the signals are out of phase with each other.
- D. In this situation, the signal is stronger than it should be because multiple signal paths are received twice at exactly the same time, which results in the multiple signals being in-phase.

Correct Answer: D

If a signal is received twice at exactly the same time, the secondary wave adds its power to the primary wave, so the receiver gets twice the positive energy (positive crest) at the same instant, then twice the negative energy (negative crest) at the same instant. The result is that both waves add up to twice the amplitude (energy) of a single wave, and both signals are said to be in phase (both signals are said to have an angle of 0 degrees). This rare condition is called upfade. If the second signal negative energy (negative crest) reaches the receiver just when the first signal positive energy (positive crest) also reaches the receiver, both signals can cancel each other, resulting in no signal at all (this is the principle used in noise cancellation headsets).
