**QUESTION 1**

A healthcare company has several smaller outlying locations with very limited bandwidth to corporate headquarters. Maintenance of computers in these locations is proving problematic, especially operating system upgrades and deployment. They would like to completely automate the operating system distribution, installation, and configuration for connected PCs in these locations with minimal impact on the WAN. They have selected a Site Server for each location. What must they do to enable re-imaging of managed computers to occur locally in each remote location?

- A. install Task and Package services on the designated site server; enable the Deployment Site server policy, Deployment Plug-in policy, and Automation Folders policy
- B. enable Deployment Site server and Deployment plug-in policies; establish a remote Deployment portal on the site server; configure PackageServer image replication
- C. install Package and Deployment site services on the designated site server; enable PXE Configuration policies; enable the Deployment TaskHandler policy
- D. enable Deployment PXE service components on the designated site server; create a preboot configuration supporting PXE; enable the Deployment Plug-in policy

Correct Answer: A

---

**QUESTION 2**

A corporation received a large order of new laptops for their sales force. Based on corporate security standards, each laptop must be outfitted with several pieces of software including virus protection, VPN software, and Office software. Unfortunately, some of the software that comes from the manufacturer is prohibited on the network and must be removed. How can Deployment Solution help this corporation?

- A. Through use of PC Transplant, it can automatically remove unwanted software and deploy the correct software from the already installed OS.
- B. Through use of DeployAnywhere, it can automatically distribute the necessary software anywhere the new sales representatives live.
- C. Through use of Distribute Image tasks, it can distribute custom-configured operating environments with only their software installed automatically.
- D. Through use of Backup Software and Deploy Software tasks, it can pull off the unwanted OEM packages and push new software packages automatically.

Correct Answer: C

---

**QUESTION 3**

A school with a limited budget either receives computers as donations or buys them in small quantities. As a result, the school has several varieties of computers and associated hardware. Each quarter, all student computers must be reset to a fresh state to prepare for the next group of students. When the computers are reset, the OS is manually installed, all of the drivers for each unique system are installed, and each application is installed one at a time by CD. The process is cost effective, but highly prone to error and often results in several days of clean-up by the teachers. Which two benefits would the school realize by using Deployment Solution? (Select two.)

- A. It can automate the application installations through use of the Software Portal.
- B. It can install the operating systems automatically using a Scripted OS Installation.
- C. It can manage the drivers for each system through use of Prepare the Image tasks.
- D. It can install the operating system automatically through use of PC Transplant.
- E. It can automate the application installations through use of Restore Software tasks.
- F. It can automate driver installation through use of Deploy Anywhere.

Correct Answer: BF

---

#### QUESTION 4

A maintenance window is configured to start at 21:00 and end at 22:00. The default Software Update Agent policy has been scheduled to run at 19:00. A Software Update policy is created and configured to install updates at 17:00, repeating daily. The maintenance window is honored. All machines are powered down Wednesdays for maintenance between 20:00 and 00:00, but are powered on at all other times. If it is Wednesday at 21:00, when can updates next be installed?

- A. 18:00 on Thursday
- B. 19:00 on Thursday
- C. 21:00 on Thursday
- D. immediately
- E. never

Correct Answer: C

---

#### QUESTION 5

A system administrator needs to quickly deploy Windows 7 to several new computers without preconfigured operating systems. The administrator decides to use an existing Ghost image since the necessary drivers have already been added to the DeployAnywhere database. The PXE Configuration is set to respond only to known computers. How should the administrator proceed?

- A. Use Ghost Solution Suite to distribute the image as the computers boot to the network.
- B. Import the list of new computers into the Management Console and assign an imaging task.
- C. Deploy an Automation Folder to the new computers to prepare them for imaging.
- D. Configure PXE to respond to a known list of MAC addresses and deploy the images only to the new systems.

Correct Answer: B
