**QUESTION 1**

Microsoft Office has been successfully pushed out as a Quick Delivery task to a group of systems. When the administrator checks the report of software currently installed on the systems, the newly delivered software is missing. Why is the installed software missing from the report?

- A. The detection rule for Office was configured with an incorrect MSI code.
- B. The most recent Software Inventory scan was run before the delivery was completed.
- C. SQL Server timed out during the building of the report, causing incomplete report results.
- D. The Software Management Solution Agent needs to be installed on the targeted computers.

Correct Answer: B

QUESTION 2

What are two possible Patch Management Solution 7.1 configuration changes that can be made to reduce the total number of bulletins managed in the solution? (Select two.)

- A. Deselect additional languages that are undesired in the Managed Languages section of the Patch Management core settings.
- B. Edit the PMLimport.xml and delete rows that contain unused language and product names found in the file.
- C. Select Microsoft product names from the Resource Inclusions section of the Microsoft settings.
- D. Select unused Microsoft product names in the environment in the Resource Exclusions section of the Microsoft settings.
- E. Select the Disable All Superseded Software Updates setting within the Import Data for Microsoft policy.

Correct Answer: AD

QUESTION 3

What are two Software Update Plug-in responsibilities? (Select two.)

- A. gathers an inventory on all installed software and their associated service pack level
- B. sends execution results of all software installed to the Notification Server
- C. gathers specific inventory on supported operating systems, applications, and the associated service pack level
- D. sends execution results of applied software bulletins to the Notification Server
- E. notifies users before a Managed Delivery policy executes

Correct Answer: CD

**QUESTION 4**

A software was virtualized during a Managed Software Delivery installation. Which method must be used to manage the layer?

- A. Virtual Composer task
- B. Software Virtualization Command task
- C. Package Delivery task
- D. Quick Delivery task

Correct Answer: B

QUESTION 5

A healthcare company has several smaller outlying locations with very limited bandwidth to corporate headquarters. Maintenance of computers in these locations is proving problematic, especially operating system upgrades and deployment. They would like to completely automate the operating system distribution, installation, and configuration for connected PCs in these locations with minimal impact on the WAN. They have selected a Site Server for each location. What must they do to enable re-imaging of managed computers to occur locally in each remote location?

- A. install Task and Package services on the designated site server; enable the Deployment Site server policy, Deployment Plug-in policy, and Automation Folders policy
- B. enable Deployment Site server and Deployment plug-in policies; establish a remote Deployment portal on the site server; configure PackageServer image replication
- C. install Package and Deployment site services on the designated site server; enable PXE Configuration policies; enable the Deployment TaskHandler policy
- D. enable Deployment PXE service components on the designated site server; create a preboot configuration supporting PXE; enable the Deployment Plug-in policy

Correct Answer: A
