QUESTION 5

Which component of the Symantec Management Platform attempts to choose a new communication path when the default communication method with the Notification Server is unavailable?

A. Site Server

B. Notification Server

C. Internet Gateway

D. Symantec Management Agent

Correct Answer: B

Notification Server automatically updates the default communication profile of the old server with the FQDN of the new server. After this change, the communication profile of the old server will remain available, but all references to it are switched to the communication profile of the new server.
