QUESTION 3

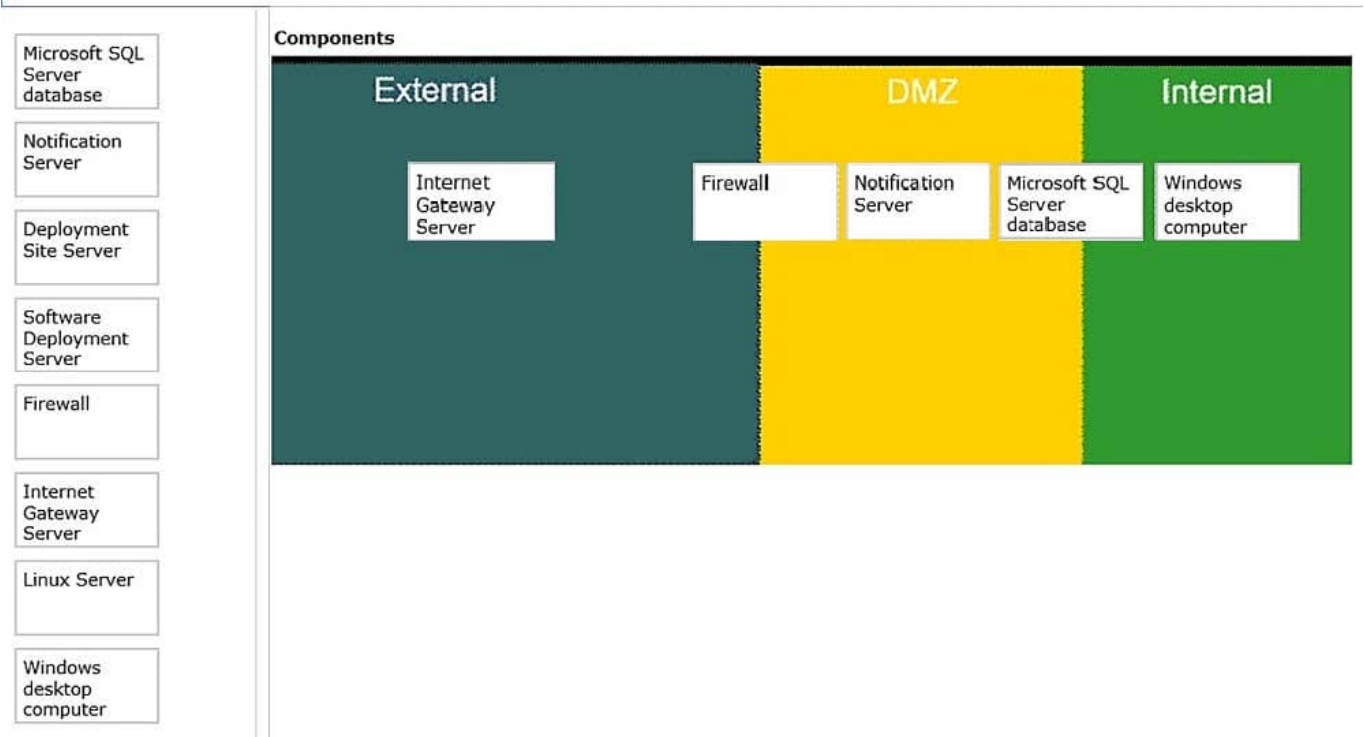

How should an administrator configure the components on the left in order to inventory computers that are connected only through the Internet?

Drag and drop the components on the left into the correct zones on the right.

Select and Place:

Correct Answer:

QUESTION 4

An asset's Status value unexpectedly changes to Retired.

What is the most likely IT Management Suite setting that would be the source of this status change, other than human error?

- A. Purging Maintenance
- B. Inventory to Asset Synchronization
- C. CMDB Rules
- D. Resource Merge Rule

Correct Answer: D

QUESTION 5

An administrator needs to quickly deploy Windows 7 to several new computers without pre-configured operating systems. The administrator decides to use an existing Ghost image since the necessary drivers have already been added to the DeployAnywhere database. The Network Boot Services configuration is set to respond only to known computers.

How should the administrator proceed?

- A. Configure NBS to respond to a known list of MAC addresses and deploy the images only to the new systems.
- B. Deploy an Automation Folder to the new computers to prepare them for imaging.
- C. Import the list of new computers into the Management Console and assign an imaging task.
- D. Use an Initial Deployment Event to distribute the image as the computers boot to the network.

Correct Answer: C
