**QUESTION 1**

Which incidents appear in the Network Incident List report when the Network Prevent Action filter is set to Modified?

- A. incidents in which confidential content was removed from the body of an SMTP email
- B. incidents in which an SMTP email was changed to include one or more SMTP headers
- C. incidents in which digital rights were applied to SMTP email attachments containing confidential information
- D. incidents in which confidential attachments were removed from an SMTP email

Correct Answer: B

QUESTION 2

You have a nonredundant concatenated volume named datavol in a disk group named datadg. The volume has a file system on it. One of the underlying disks of the volume called datadg02 fails temporarily due to a power failure. You fix the problem of the power failure, and ensure that the disk is powered back again. You ensure that both the system and VxVM can see the disk again. Then, you reattach the disk back to the disk media record.

Which command will you execute next to be able to run fsck on the file system?

- A. vxvol -g datadg start datavol
- B. vxrecover -s datavol
- C. vxrecover -ns
- D. vxvol -g datadg -f start datavol

Correct Answer: D

QUESTION 3

You have installed Storage Foundation 5.0 on the Unix platform and need to add licenses. You want to ensure that the licenses are correctly installed on the system.

What should you do?

- A. Add the valistat package.
- B. Add the VRTSvlic package.
- C. Add the vxlicrep package.
- D. Add the VRTSspt package.

Correct Answer: B

QUESTION 4

You have designed a tiered storage environment using ISP volumes. You have also created the disk group that will be used to hold the tiered volumes. You now want to apply the appropriate tags to the disks. What should you do?

- A. Use the vxdiskadm settag command with the cost option to apply appropriate tags to the disks.
- B. Use the vxdisk settag command with the cost option to apply appropriate tags to the disks.
- C. Use the vxpool settag command with the cost option to apply appropriate tags to the disks.
- D. Use the vxtemplate settag command with the cost option to apply appropriate tags to the disks.

Correct Answer: B

QUESTION 5

You are managing Veritas Storage Foundation for Oracle. You need to pre-allocate space for a database file named db_data. To do this, you first create a db_data file on a mounted point. Next, you execute the command setext

Correct Answer: C
