QUESTION 1

An IT department is decommissioning a storage array and tasks an administrator with removing a datastore from ESXi hosts. What is a prerequisite for unmounting the datastore? (Choose the best answer.)

A. The datastore is NOT managed by Storage DRS.

B. The datastore is NOT being used by vSphere High Availability heartbeating.

C. The datastore is NOT referenced by a host profile.

D. The datastore does NOT contain powered-off virtual machines.

Correct Answer: A

Reference: https://kb.vmware.com/s/article/2004605

QUESTION 2

Administrator successfully installs VMware ESXi onto the first host of a new vSphere duster but makes no additional configuration changes. When attempting to log into the vSphere Host Client using the Fully Qualified Domain Name (FQDN) of the host, the administrator receives the following error message:

"server Not Found –we can\\'t connect to the server at esxit101.corp.local." Host FQDN: esxi 101. Corp. local Management VLAN ID: 10 DHCP: No Management IP Address: 172.16.10.101/24 Management IP Gateway: 172.16.10.1 Corporate DNS Servers: 172.16.10.5, 172.16.10.6 DNS Domain: corp.local

Which three high level tasks should the administrator complete, at a minimum, in order to successfully log into the

the vSphsrs Host Client using the FQDN for the exxi101 and complete the configuration (Choose three.)

A. Ensure a DNS A Record Is created for the VMware ESXI host on the corporate DNS servers,

B. Update the VMware ESXI Management Network DNS configuration to use the corporate DNS servers for name, resolution,

C. Update the VMware ESXI Management Network IPv4 configuration to use a static a IPv4 address.

D. Configure at least two network adapters for the VMware ESXI Management Network.

E. Set the value of the VMware ESXI Management Network VLAN ID to 10.

F. Disable IPv6 for the VMware ESXI Management Network.

Correct Answer: AB

Explanation: To successfully log into the vSphere Host Client using the FQDN for the ESXi host, the administrator needs to ensure a DNS A Record is created for the VMware ESXi host on the corporate DNS servers, which maps its FQDN to its IP address; and update the VMware ESXi Management Network DNS configuration to use the corporate DNS servers for name resolution, which allows resolving its FQDN. QUESTION 3

An administrator wants to create virtual machine (VM) templates and store them in a content library. The administrator would like to use the content library to manage different versions of these templates so that reverting to an earlier version is an option.

How should the administrator create these templates?

A. Select a VM in the vCenter inventory. Clone the VM to the content library as a VM template type.

B. Select a VM template in the vCenter inventory. Clone the template to the content library.

C. Export a VM in the vCenter inventory to an OVF template. Import the OVF template into the content library.

D. Convert a VM to a template in the vCenter inventory. Clone the template to the content library.

Correct Answer: A

Explanation: Option A is correct because it allows the administrator to clone a VM to the content library as a VM template type, which can be used to create and manage different versions of these templates in the content library. Option B is incorrect because it requires the administrator to convert a VM to a template in the vCenter inventory first, which is an extra step. Option C is incorrect because it requires the administrator to export a VM to an OVF template and import it into the content library, which are extra steps. Option D is incorrect because it requires the administrator to convert a VM to a template in the vCenter inventory and clone it to the content library, which are extra steps.

QUESTION 4

An administrator wants to implement virtual machine encryption.

Which component encrypts the virtual machine files? (Choose the best answer.)

A. Certificate

B. Data encryption key (DEK)

C. Key encryption key (KEK)

D. Key management server (KMS)

Correct Answer: BC

QUESTION 5

Refer to the exhibit.

Alarm Rule1 ✕

IF

| VM CPU Ready Time ⌄ | is below ⌄ | 1000=== ms for 15 min ⌄ |

ADD ADDITIONAL TRIGGER

THEN

Trigger the alarm and * | Show as Critical ⌄ |

Send email notifications ⚪

[ADD ANOTHER RULE] [DUPLICATE RULE] REMOVE RULE

An administrator is consistently receiving an alarm regarding a CPU performance issue; however, there is NO CPU issue identified.

What can the administrator do to make sure the alarm is triggered when there is an actual CPU performance issue? (Choose the best answer.)

A. Change `VM CPU Ready Time\\' to `VM Memory Usage.\\'

B. Change `Show as Critical\\' to `Show as Warning.\\'

C. Change `VM CPU Ready Time\\' to `VM CPU Usage.\\'

D. Change `is below\\' to `is above.\\'

Correct Answer: D
