QUESTION 1

Refer to the exhibit.

The App-Dev team requests that IT provide them with a multi-cloud catalog where they can use self-service to deploy their own development workloads without needing to raise a work order with the IT team. The company security policy requires that users be granted the least privileges necessary to fulfill their role.

Within vRealize Automation (vRA), the administrator successfully updates the existing directory configuration to include the App-Dev-User group and then uses the Enterprise Groups feature to assign both organization and service roles to the App-Dev team. The administrator then logs into vRA, creates a dedicated App-Dev project and adds the appropriate development cloud zones, synchronizes the standardized blueprints from GitHub and releases them to Service Broker and configures the content sources so they show up in the service catalog. The administrator checks and is able to see the blueprints, and requests that the App-Dev team leader log in and access the catalog. The App-Dev team leader replies with the attached screenshot and requests more information about where to find the service catalog.

Which two actions should the administrator take within Identity and Access Management to resolve the access issue for the App-Dev team? (Choose two.)

A. Change the assigned organization role to Member.

B. Change the assigned organization role to Owner.

C. Assign the Service Broker Administrator service role.

D. Assign the Service Broker User service role.

E. Assign the Cloud Assembly User service role.

Correct Answer: AD

QUESTION 2

What is the purpose of a cloud zone?

A. A cloud zone is a method of connecting to a type of resource provider.

B. A cloud zone is used for organizing users and groups.

C. A cloud zone is used to segregate resources for provisioning within a cloud account.

D. A cloud zone is a simplified user interface for users who do not need full access to developing and building blueprints.

Correct Answer: C

QUESTION 3

An administrator creates multiple flavor mappings and names them as follows: Small:

1.

vCenter / Datacenter:datacenter-1 ?cpu = 1, memory = 2 GB

2.

AWS-West-1 / us-west-1 = t2.micro

Medium:

1.

vCenter / Datacenter:datacenter-1 ?cpu = 2, memory = 4 GB

2.

AWS-West-1 / us-west-1 = t2.small

Where would the administrator use those named mappings to allow users to select image sizes?

A. Blueprints

B. Custom forms

C. Cloud zones

D. Projects

Correct Answer: D

QUESTION 4

An administrator must restrict the amount of memory resources available for a specific group of users.

On which component would the administrator configure this?

A. Projects

B. Cloud Accounts

C. Cloud Zones

D. Flavor Mappings

Correct Answer: C
