If you are preparing the Linux machine for use as a multi-session host, verify that one of the following required distributions is installed on the machine: RHEL 8.x/7.x Ubuntu 18.04 <https://docs.vmware.com/en/VMware-Horizon/2006/linux-desktops-setup/GUID-92110540-8170-49C3-A150-F9C64D5075DB.html#GUID-92110540-8170-49C3-A150-F9C64D5075DB>

QUESTION 5

An end-user complains that their logon time has increased dramatically. A Administrator open the VMware Logon folder to troubleshoot the issue, but it does not contain log files for the reported session. What could be the cause of this issue?

- A. The Timing Profile is disabled on the Connection server.
- B. The Horizon Event Database is not configured.
- C. The VMware Horizon Logon Monitor service is not started.
- D. The Windows Event Viewer is disabled.

Correct Answer: C

<https://kb.vmware.com/s/article/77099> When the Horizon Agent is installed, the VMware Login Monitor service defaults to manual. You must change the startup type to automatic. The user logon segments are not sent to the Horizon Events log but if the timing profiler on the connection servers is enabled, you will see the segments in the Helpdesk Tool.
