QUESTION 1

Drag and drop the codecs supported by Blast on the left to the appropriate use case on the right.

Select and Place:

Codec	Use Case
JPEG / PNG	<input type="checkbox"/> low-motion graphics, high-quality graphics such as Photoshop, and AutoCAD
H.264	<input type="checkbox"/> rapidly moving content and motion graphics such as streaming video
HEVC	<input type="checkbox"/> rapidly moving content and motion graphics such as streaming video on a low bandwidth resource
Blast Codec	<input type="checkbox"/> still images such as spreadsheets and documents

Correct Answer:

Codec	Use Case
<input type="checkbox"/> Blast Codec	<input type="checkbox"/> low-motion graphics, high-quality graphics such as Photoshop, and AutoCAD
<input type="checkbox"/> H.264	<input type="checkbox"/> rapidly moving content and motion graphics such as streaming video
<input type="checkbox"/> HEVC	<input type="checkbox"/> rapidly moving content and motion graphics such as streaming video on a low bandwidth resource
<input type="checkbox"/> JPEG / PNG	<input type="checkbox"/> still images such as spreadsheets and documents

JPEG/PNG - Still images.

H.264: Rapidly moving content and motion graphics such as streaming video, video editing, and gaming.

HEVC: Rapidly moving content on a low bandwidth resource.

Proprietary Blast codec: Low-motion graphics, high-quality graphics such as Photoshop, and AutoCAD.

QUESTION 2

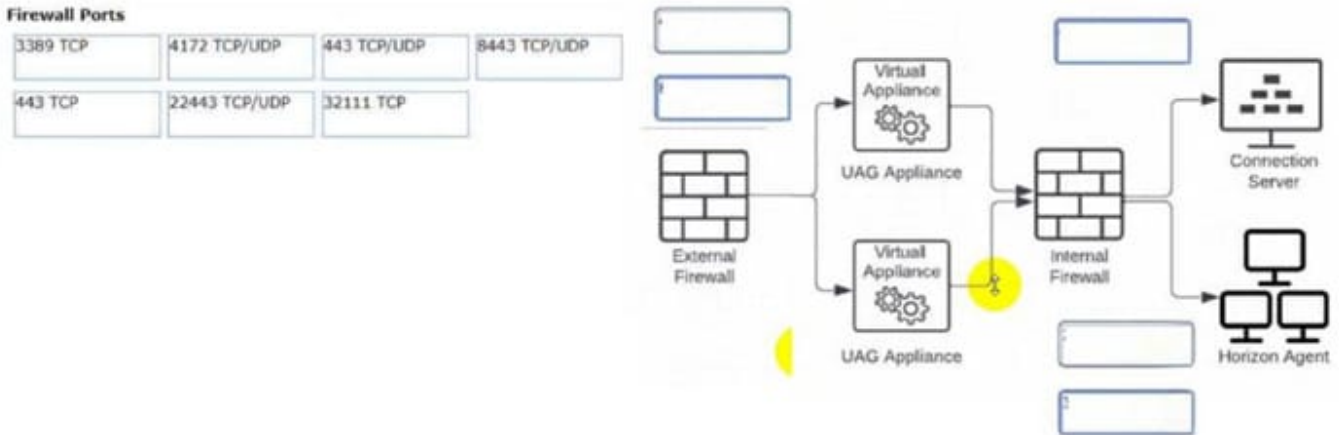

Refer to the exhibit.

Drag and drop the appropriate firewall ports in support of the Blast Extreme protocol into the correct locations in the diagram on the right.

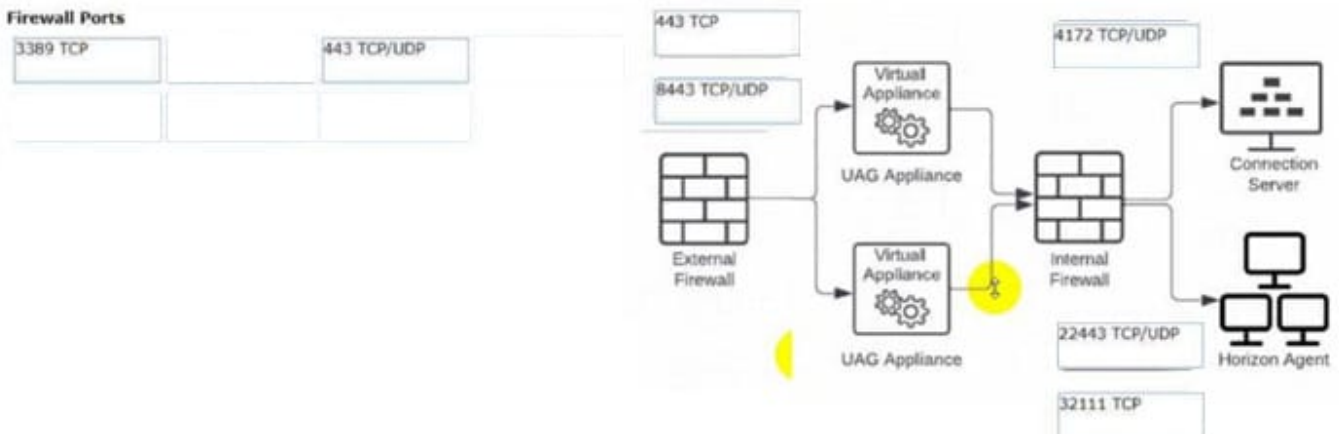

Two options will not be used.

Select and Place:

Correct Answer:

C:\Users\Waqas Shahid\Desktop\Mudassir\Untitled.jpg

QUESTION 3

What is the effect of changing any VMware Blast policy that cannot be changed in real time?

- A. Horizon Client detects the change and prompts the user to reboot once every 480 seconds.
- B. VMware Tools services is restarted by Microsoft GPO Update service.
- C. VMware Tools detects the change and immediately applies the new setting within 480 seconds.

D. Microsoft GPO update rules apply and GPOs are updated manually or by restarting the Horizon Agent.

Correct Answer: D

Explanation: VMware Blast policy settings are stored in the registry key HKLM\Software\Policies\VMware, Inc.\VMware Blast\Config on the remote desktops or RDS hosts that use the VMware Blast display protocol. These settings can be configured by using the VMware Blast ADMX template file (vdm_blast.admx) and applying it through Microsoft Group Policy Object (GPO). Some of these settings can be changed in real time, which means that they take effect immediately after the policy is applied, without requiring a reboot or a reconnection of the Horizon Client. However, some of these settings cannot be changed in real time, which means that they require a reboot or a reconnection of the Horizon Client to take effect. The effect of changing any VMware Blast policy that cannot be changed in real time is that the Microsoft GPO update rules apply and GPOs are updated manually or by restarting the Horizon Agent. This means that the new policy settings will not be applied until one of the following events occurs: The Horizon Agent service is restarted on the remote desktop or RDS host. This can be done manually by using the Services console or the command-line tool sc.exe, or automatically by using a scheduled task or a script. The remote desktop or RDS host is rebooted. This can be done manually by using the Restart option in Windows, or automatically by using a scheduled task or a script. The Group Policy refresh interval is reached. This is a configurable time interval that determines how often the system checks for and applies new or changed GPOs. By default, this interval is 90 minutes for domain members and 5 minutes for domain controllers, with a random offset of 0 to 30 minutes. This interval can be modified by using the Group Policy refresh interval for computers setting in the ComputerConfiguration\Administrative Templates\System\Group Policy folder of the Group Policy Management Console. Therefore, to ensure that the VMware Blast policy settings that cannot be changed in real time are applied as soon as possible, it is recommended to restart the Horizon Agent service or reboot the remote desktop or RDS host after applying the policy. QUESTION 4

To reduce the risk of users downloading malware to the corporate network, an administrator wants to allow end-users to open only intranet websites inside their virtual desktop. Additionally, the administrator wants to configure all other URLs to automatically open in a browser on the end-user's client machine.

Which steps should the administrator take to meet the requirements? (Choose two.)

- A. Enable the URL Content Redirection feature in Horizon Agent.
- B. Disable the Allow External Website feature in Horizon Agent.
- C. Enable secure website settings in the Global Settings Security menu.
- D. Configure group policy settings to indicate how Horizon Agent redirects the URL
- E. Enable the URL Content Redirection feature on the desktop pool settings.

Correct Answer: AD

Explanation: The URL Content Redirection feature allows administrators to configure specific URLs to open on the client machine or in a remote desktop or published application. This can help reduce the risk of users downloading malware to the corporate network, as well as improve the user experience and performance of certain web applications. To meet the requirements of the scenario, the administrator needs to enable the URL Content Redirection feature in Horizon Agent when installing or upgrading it on the instant-clone desktops. This will allow Horizon Agent to send or receive URLs from Horizon Client, depending on the redirection direction. The administrator also needs to configure group policy settings to indicate how Horizon Agent redirects the URL. Specifically, the administrator needs to enable agent-to-client redirection, which means that Horizon Agent sends the URL to Horizon Client, which opens the default application for the protocol in the URL on the client machine. The administrator also needs to specify which URLs are redirected from a remote desktop to a client, and which URLs are not redirected. In this case, the administrator needs to configure

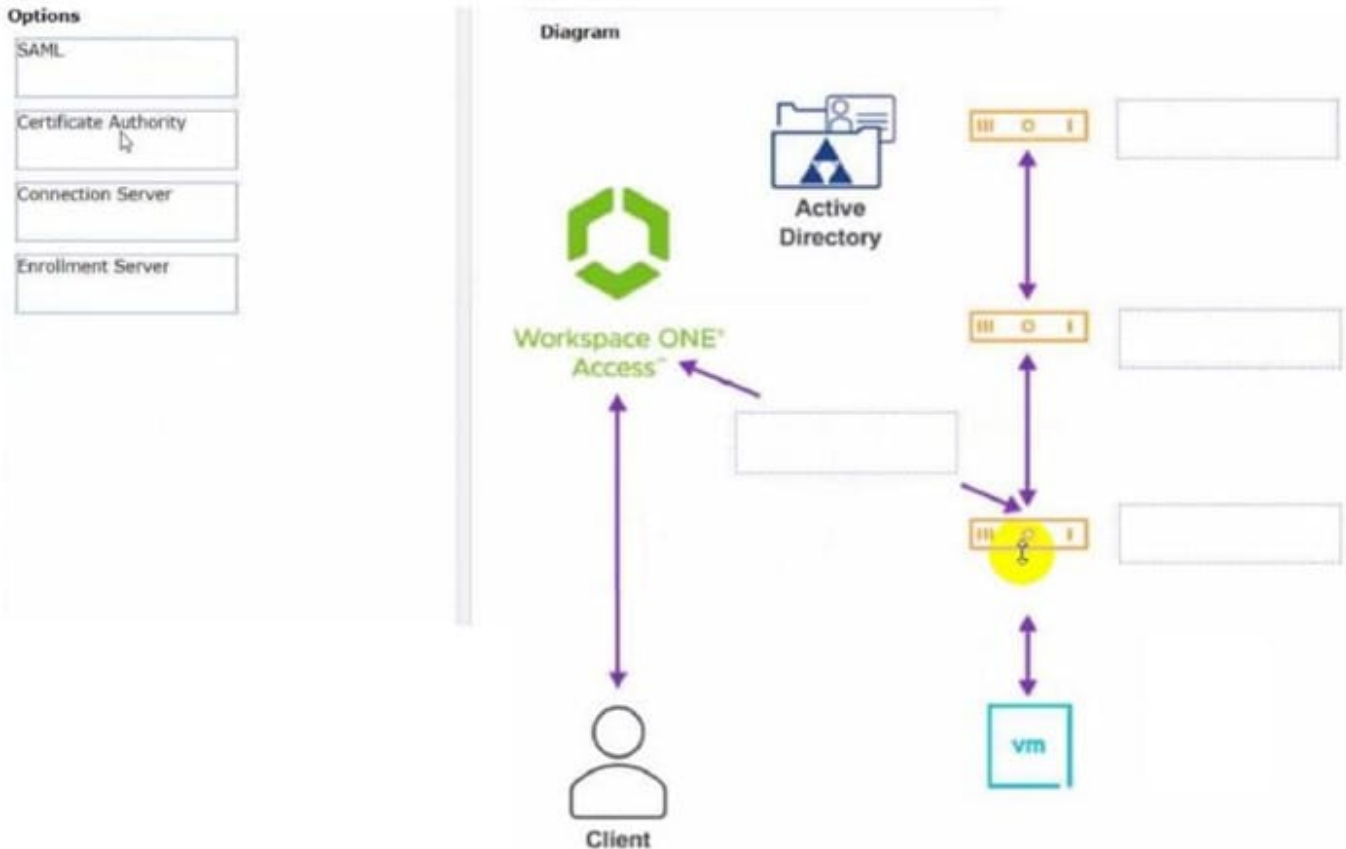

a whitelist of intranet websites that are allowed to open inside the virtual desktop, and a blacklist of all other websites that are automatically redirected to a browser on the client machine. The other options are not relevant or sufficient for meeting the requirements. Disabling the Allow External Website feature in Horizon Agent will prevent users from accessing any external websites from their virtual desktops, which might not be desirable or practical. Enabling secure website settings in the Global Settings Security menu will not affect how URLs are redirected, but only how secure connections are established between Horizon components. Enabling the URL Content Redirection feature on the desktop pool settings will not work unless it is also enabled in Horizon Agent and configured with group policy settings. QUESTION 5

Refer to the exhibit.

Drag and drop the correct options to build a Simple True 5SO Architecture on the left into the diagram on the right.

Select and Place:

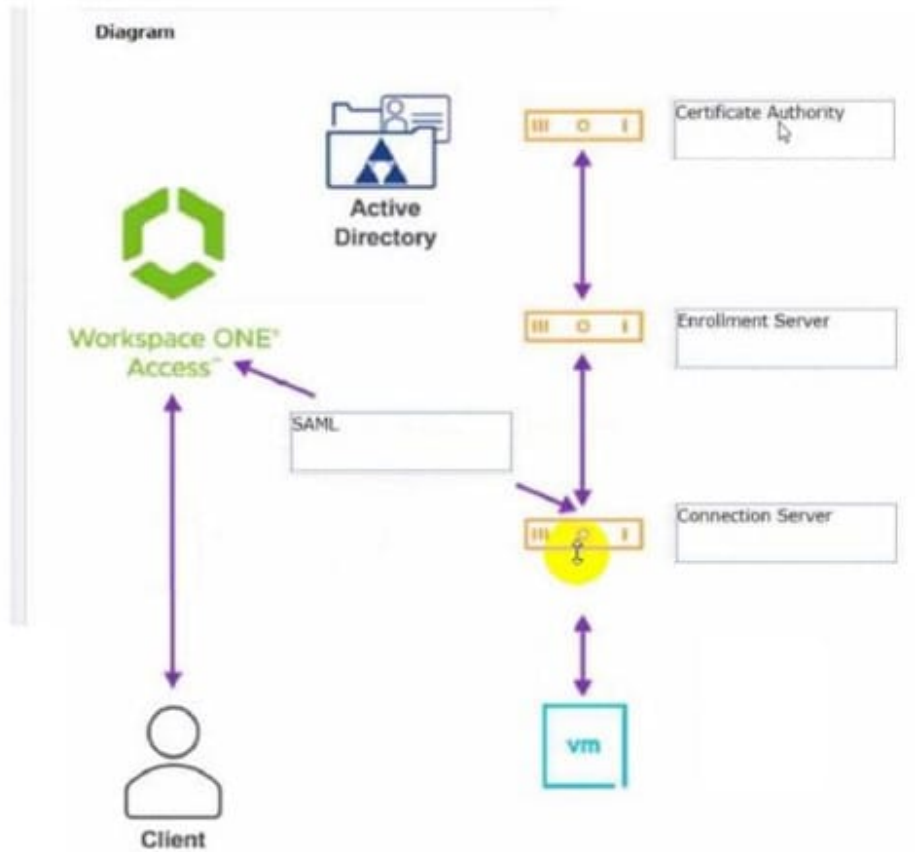

Correct Answer:

Options

Four empty rectangular input fields stacked vertically.
