QUESTION 4

A customer has two sub-organizations with different domains with separate AD servers. Both Domain Controllers and Cloud Connector are in the same subnet. The first sub-organization is currently set up to manage devices in Workspace One UEM using Cloud Connector and a VMware Identity Manager.

What is the VMware recommendation to set up the second sub-organization that is not set up for management with Workspace One UEM?

- A. Use the same Cloud Connector server and set up directory services and request an additional Identity Management Tenant
- B. Deploy Use an additional Cloud Connector server and set up directory services server and request additional Identity Management Tenant
- C. Deploy an additional Cloud Connector Server and set up Directory services and then use the Identity Manager Tenant currently available
- D. Use the same Cloud Connector server to set up directory services and the same Identity management tenant

Correct Answer: C

QUESTION 5

One directory user from an organization is not able to enroll any more devices. However, the directory administrator is still able to log into the Workspace ONE UEM Console to validate settings. Which two could be the cause of the issue? (Choose two.)

- A. The Directory Service integration broke for this organization.
- B. The devices this user tried to enroll were not supervised.
- C. The user account is not imported to Workspace ONE Access.
- D. The user has reached maximum number of allowed device.
- E. The user account is suspended in Active Directory.

Correct Answer: DE
